YB Inspire

Setting up your AI website assistant

A step-by-step guide from creating your account to chatting live with a website visitor.

Every screenshot in this guide comes from a real run-through of the product.

What you will do in this guide

- Create an account and sign in
- Teach your assistant from your website and from a PDF document
- Write how the assistant should behave, including when to collect a visitor's contact details and when to pass the chat to a person
- Try it out, then make it live
- Add the chat window to your website and test it as a visitor would
- Reply to a visitor yourself when they ask for a person
- See the contact details you collected

Example used throughout

- Account holder: Priya Shah
- Website: pragnakalp.com (home page only)
- Document: "The Little Star and the Sleepy Moon", a short bedtime story in PDF form

Contents

1. Create your account
2. Sign out and sign in again
3. Open your assistant
4. Teach your assistant (Knowledge)
5. Tell your assistant how to behave (Draft)
6. Try it out (Test)
7. Go live (Publish)
8. Add the chat window to your website (Settings)
9. Try the chat window as a visitor
10. Reply to a visitor yourself
11. See the contacts you collected

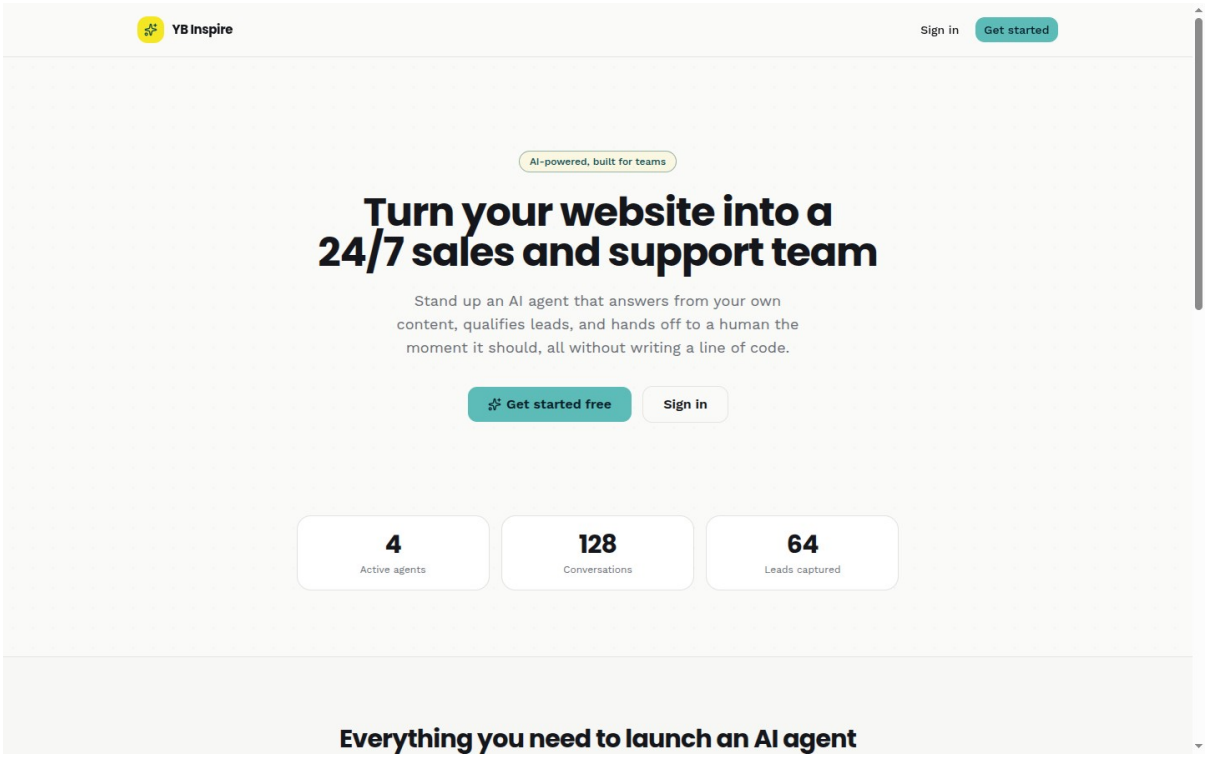

Quick checklist

1. Create your account

Signing up gives you your own workspace with a ready-made website assistant.

1.1 Open the website

Go to the YB Inspire home page and click **Get started free**.

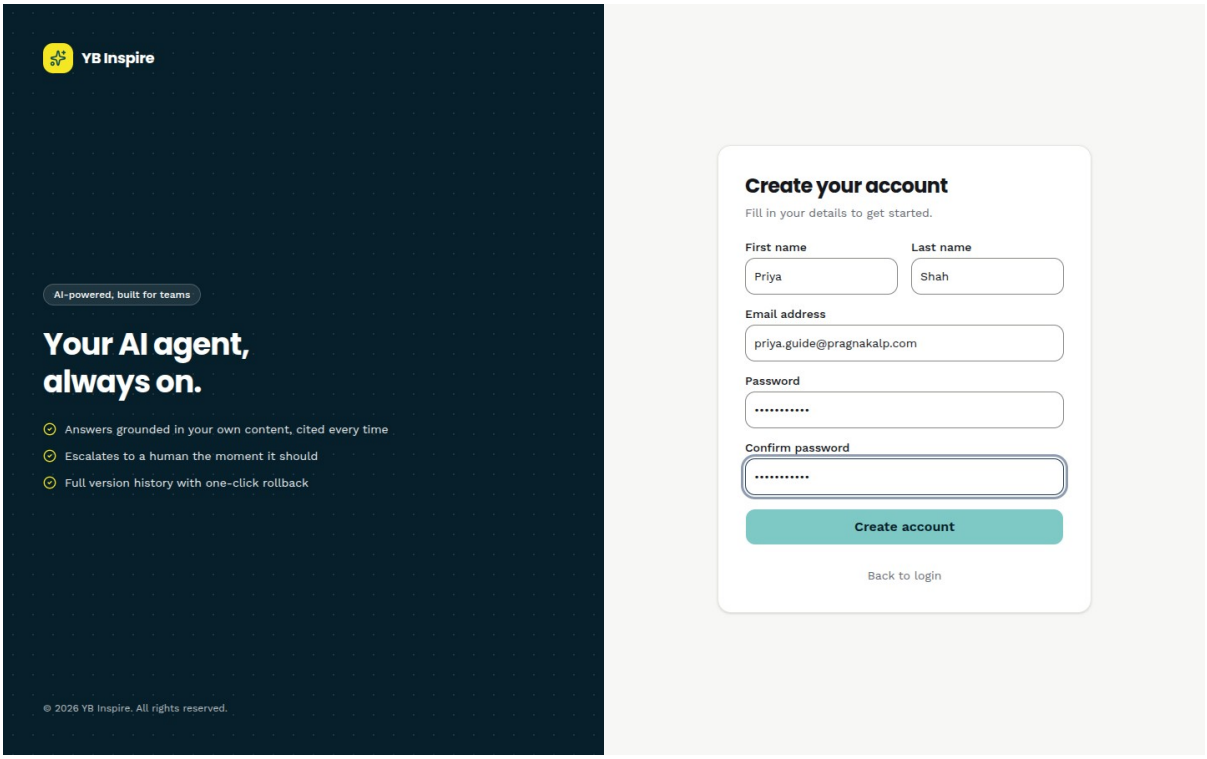

The YB Inspire home page

1.2 Fill in your details

Enter your first name, last name, email address and a password (twice), then click **Create account**.

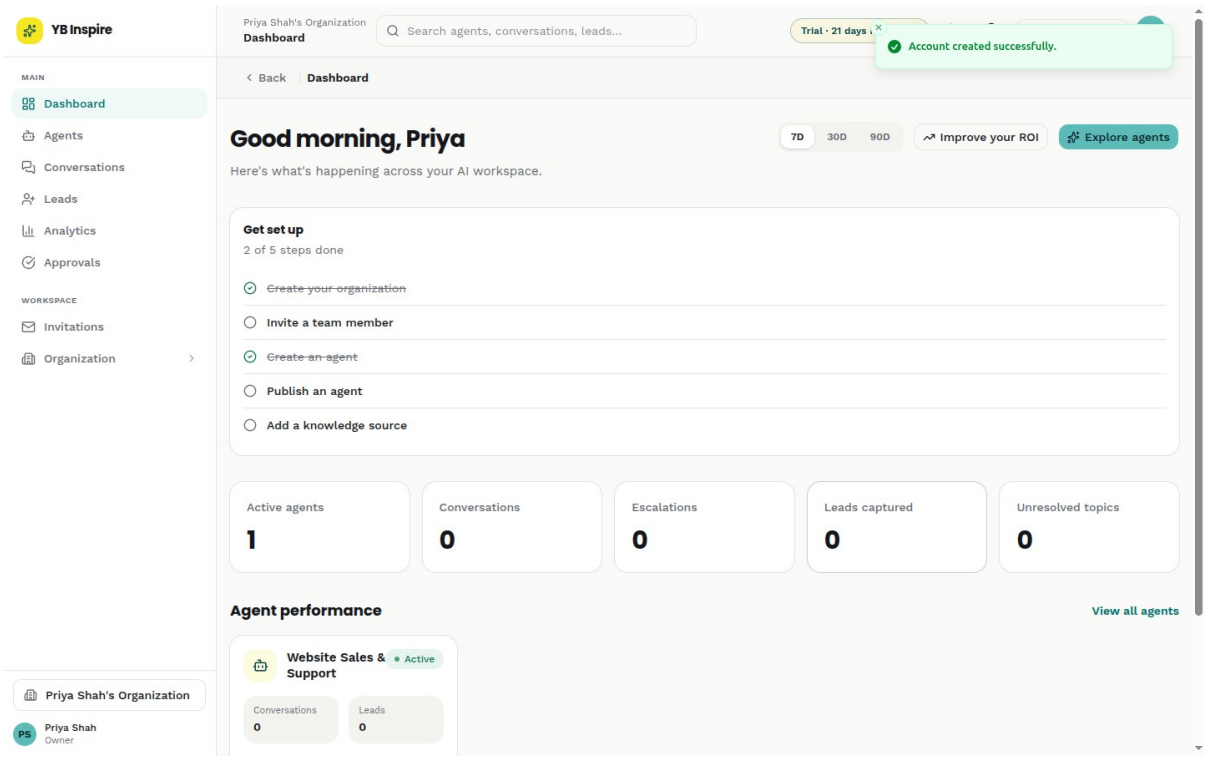

First name: Priya
Last name: Shah
Email: priya.guide@pragnakalp.com

The sign-up form, filled in

1.3 Your dashboard

You are signed in straight away and land on your dashboard. The **Get set up** list already shows two steps done: your organization and your first assistant have been created for you.

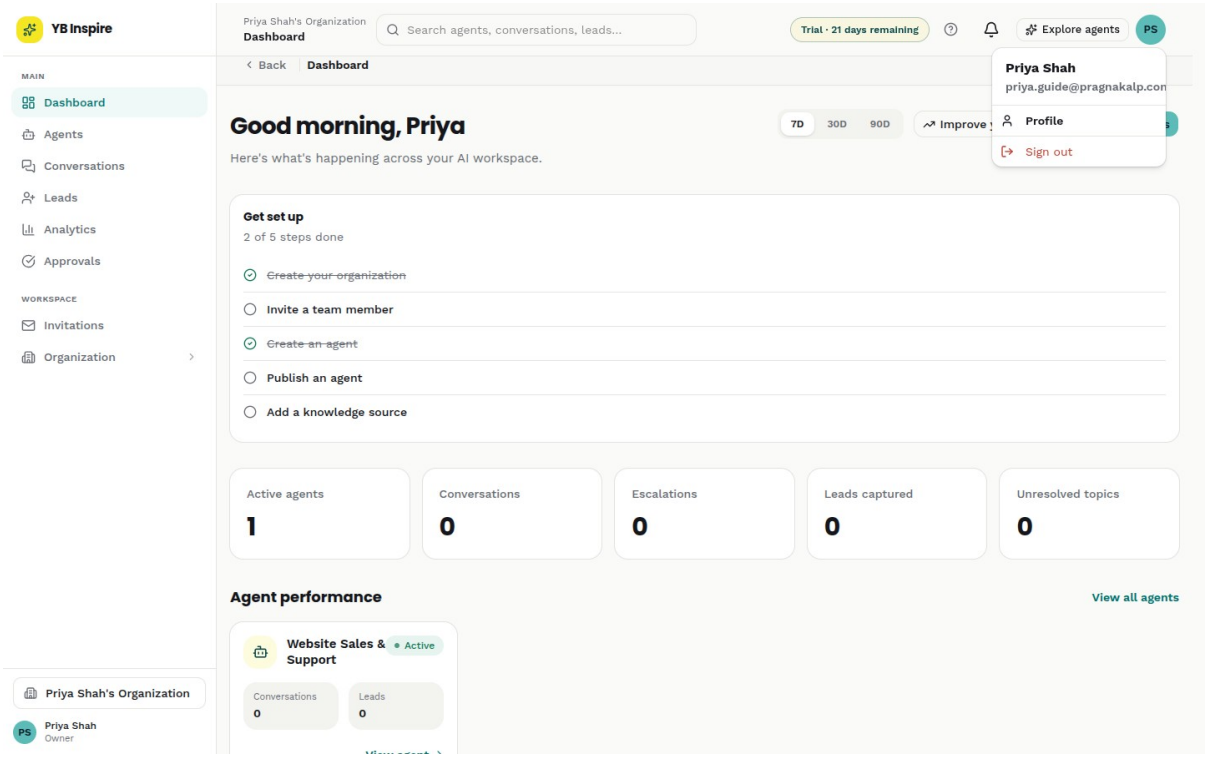

Your dashboard right after signing up

2. Sign out and sign in again

How to get back into your account later.

2.1 Sign out

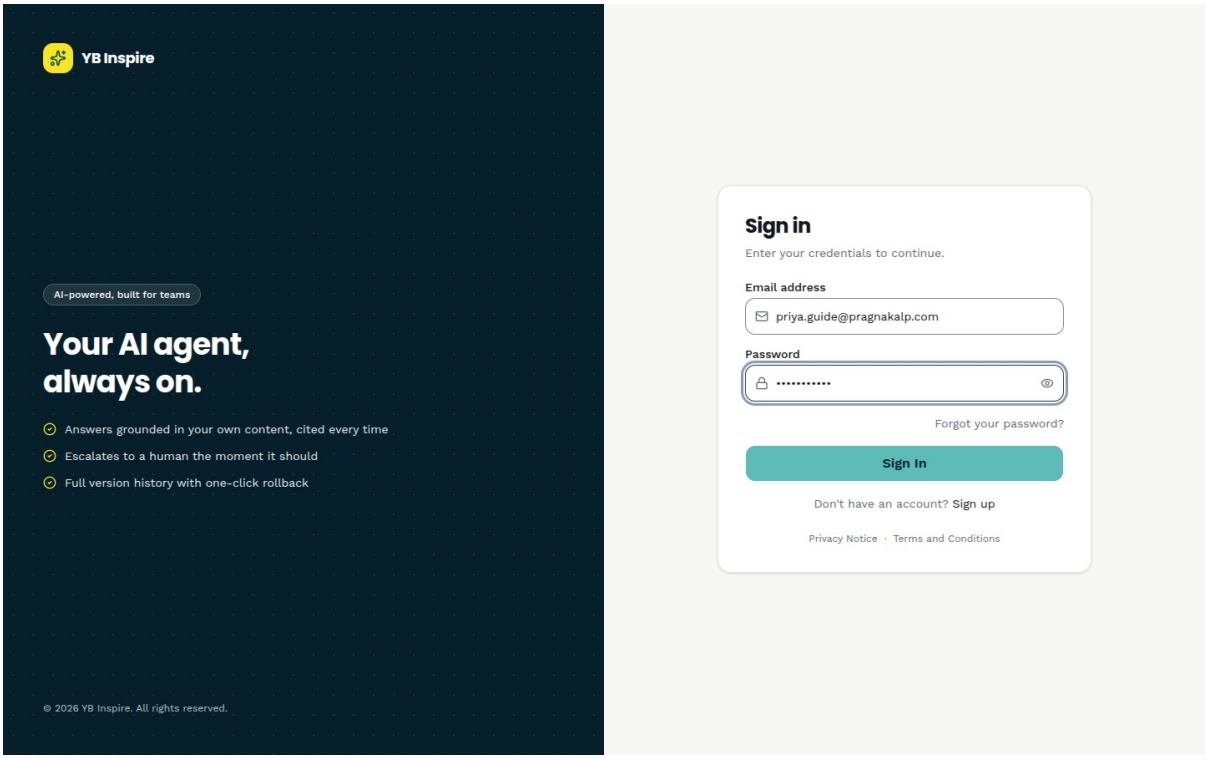

Click your initials in the top-right corner, then **Sign out**.

The profile menu

2.2 Sign in

On the sign-in page, enter your email and password and click **Sign In**. You are taken back to your dashboard.

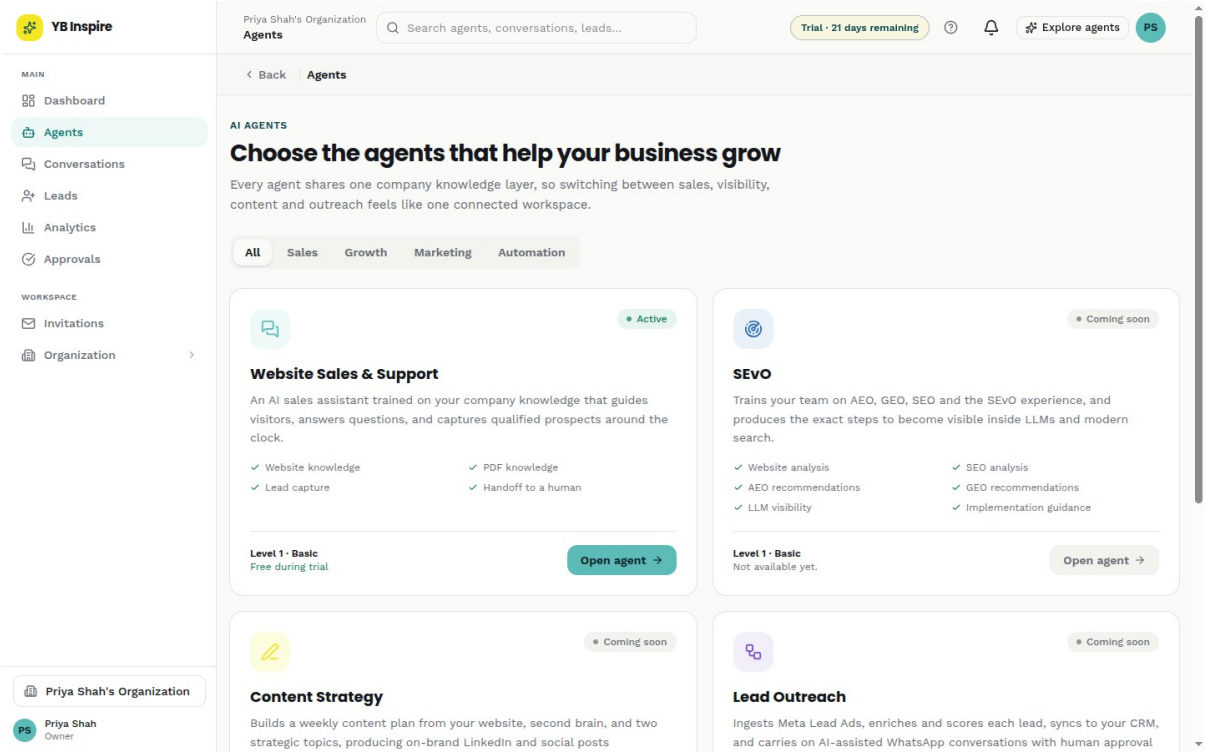

The sign-in page

3. Open your assistant

Everything about your assistant lives on one page, split into tabs.

3.1 Go to Agents

Click **Agents** in the left menu. Your assistant is called **Website Sales & Support**. Click **Open agent**.

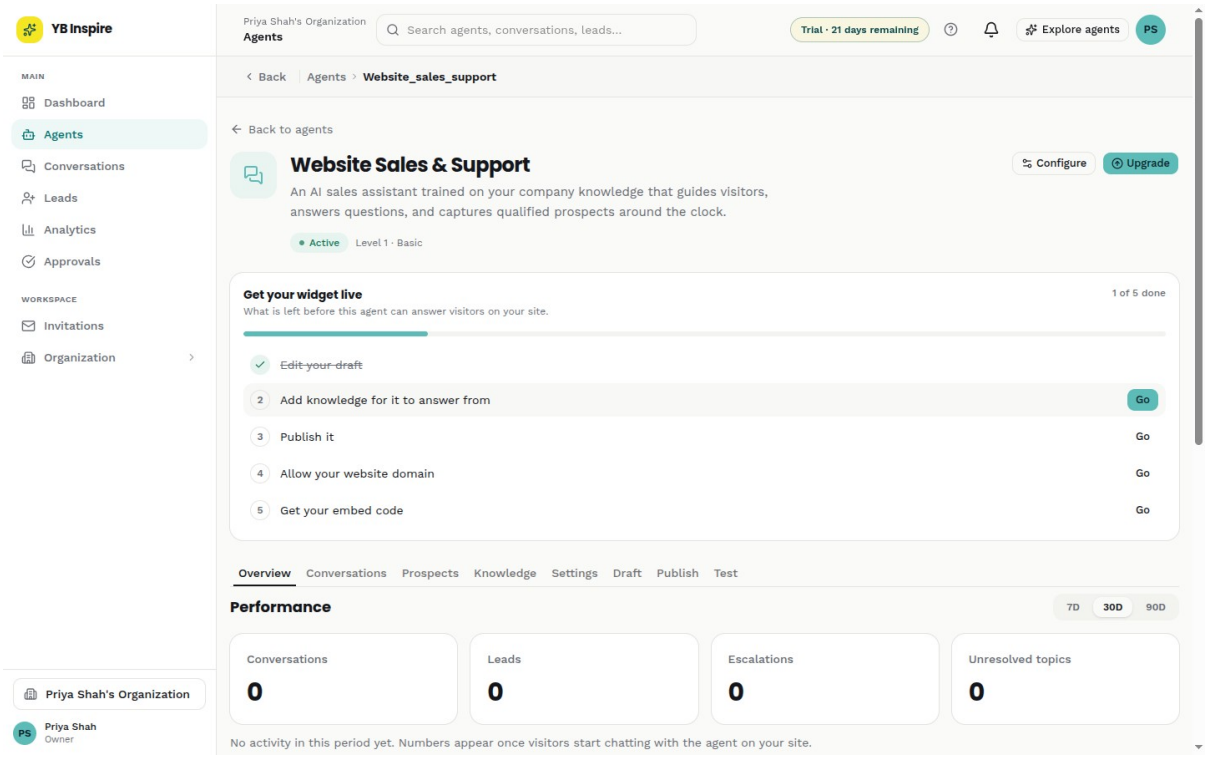

The Agents page

3.2 The overview

The **Get your widget live** card lists what is left before visitors can chat with your assistant. This guide goes through each item in order.

The tabs underneath are: Overview, Conversations, Prospects, Knowledge, Settings, Draft, Publish and Test.

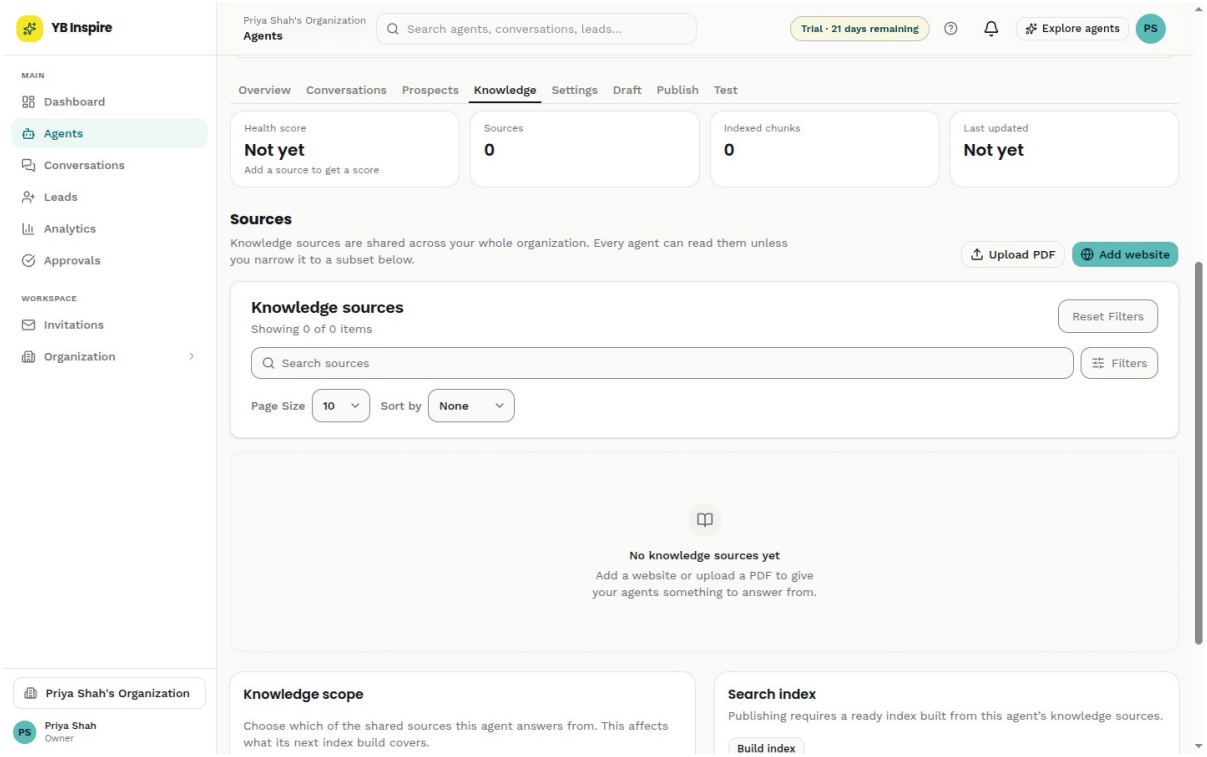

Your assistant's overview page

4. Teach your assistant (Knowledge)

Your assistant only answers from what you give it here, so it never makes things up.

4.1 Open the Knowledge tab

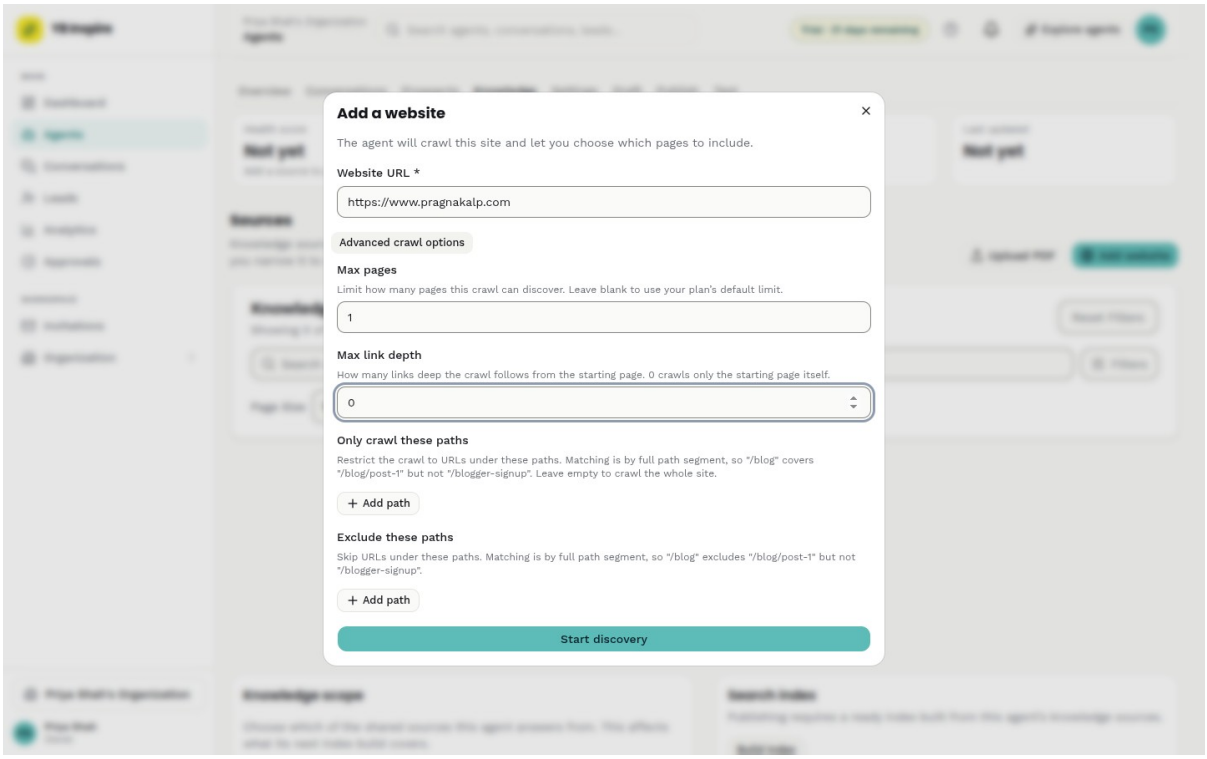

At first it is empty. There are two ways to add content: **Upload PDF** and **Add website**.

The empty Knowledge tab

4.2 Add your website

1. Click **Add website**.
2. Type your website address, for example **https://www.pragnakalp.com**.
3. To read only your home page, click **Advanced crawl options**, set **Max pages** to **1** and **Max link depth** to **0**. Leave these blank to read the whole site.
4. Click **Start discovery**.

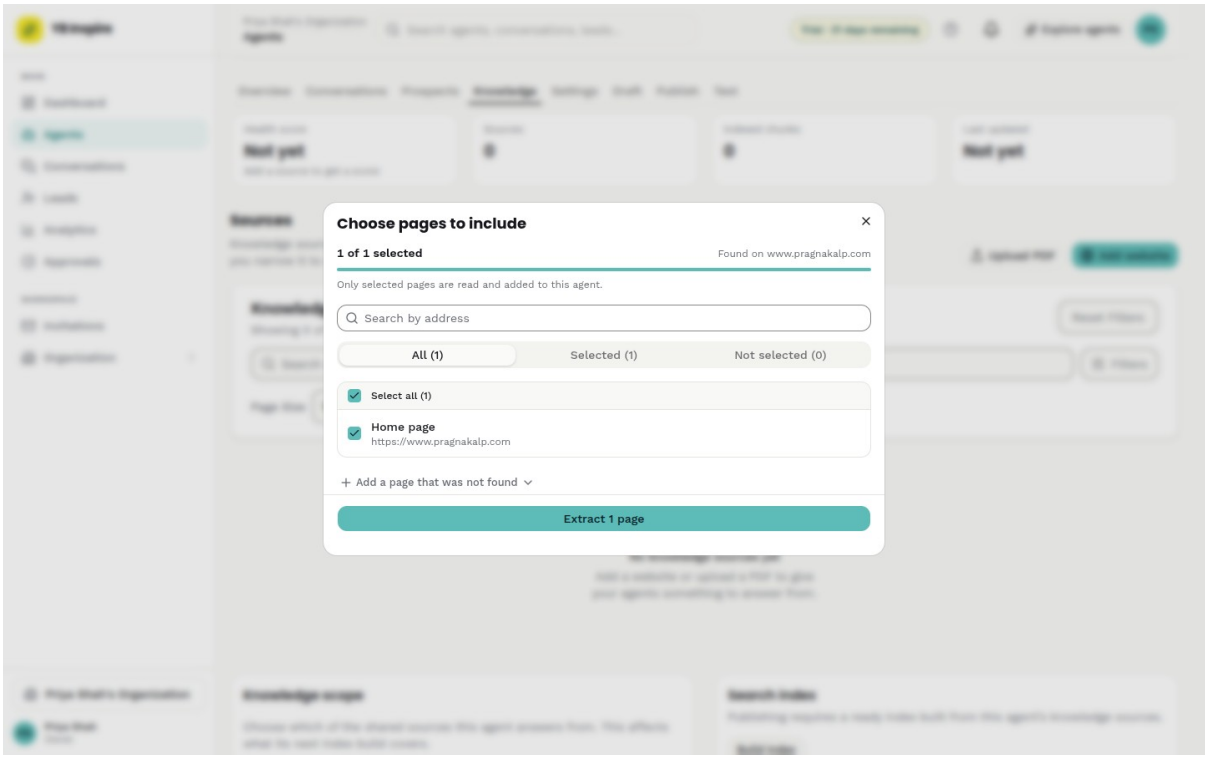

Adding a website, home page only

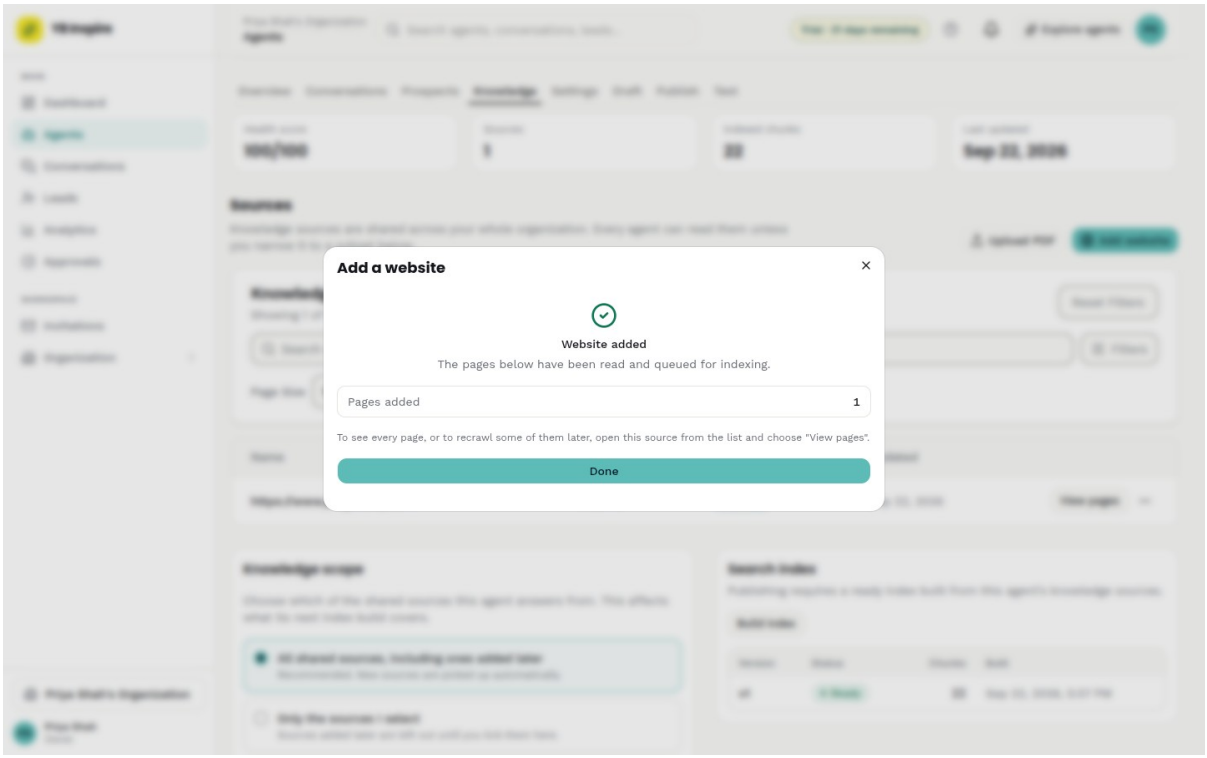

4.3 Choose the pages

You see the pages that were found, all ticked. Untick anything the assistant should not learn from, then click **Extract**. When it finishes you see **Website added**. Click **Done**.

You can close this window while it is working; it carries on in the background.

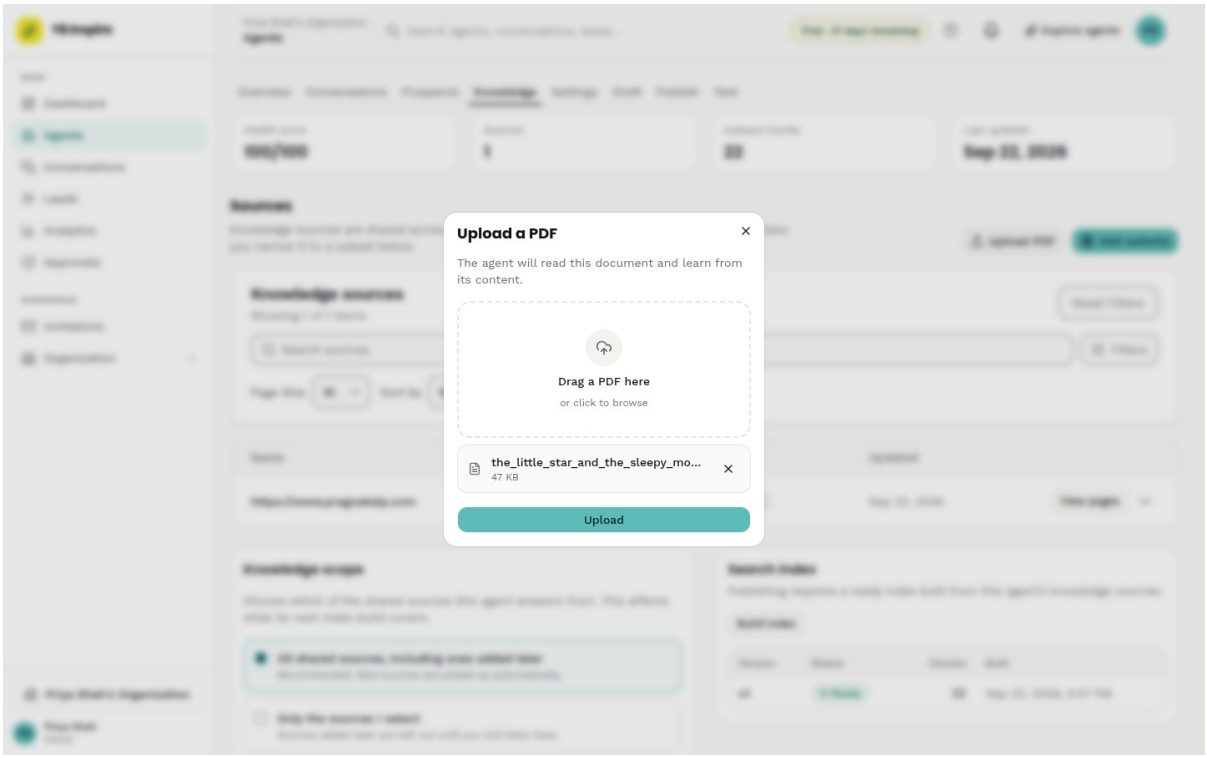

Choosing which pages to include

The website has been added

4.4 Upload a PDF

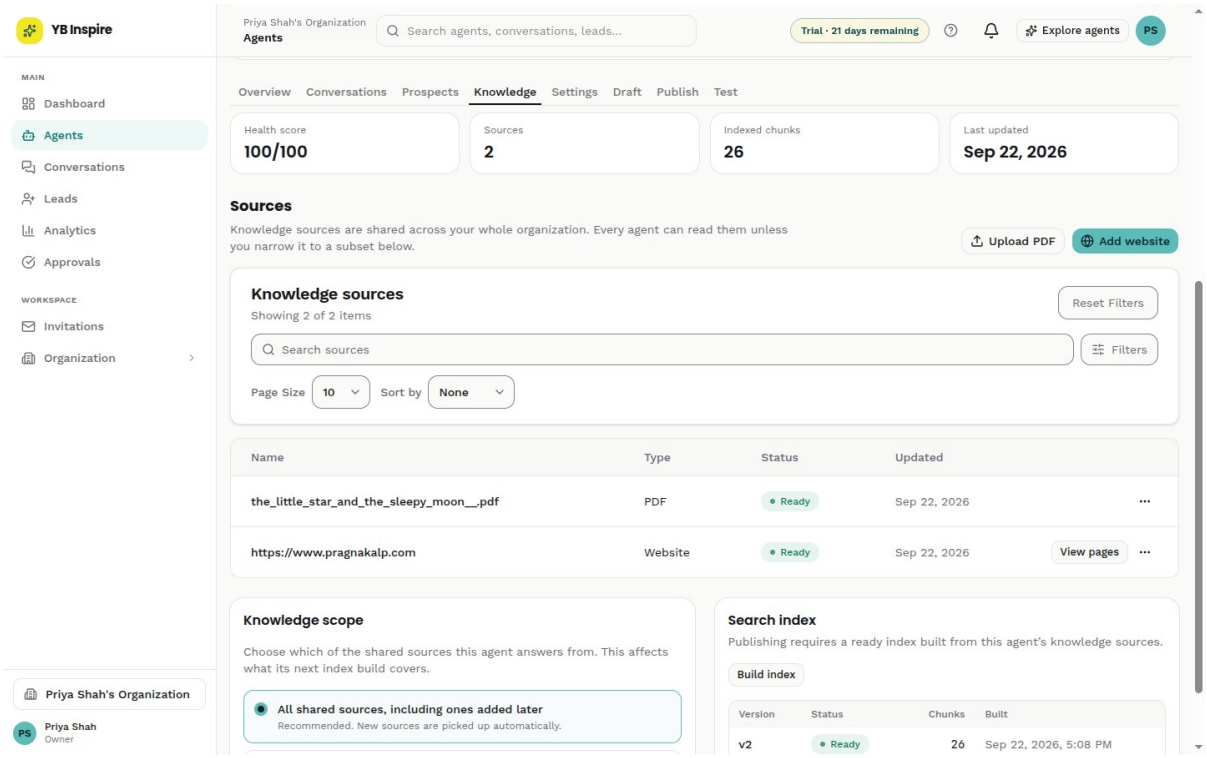

Click **Upload PDF**, drag your file in (or click to browse), then click **Upload**.

A PDF ready to upload

4.5 Wait until everything is Ready

After a short while both items show **Ready** and the health score reaches **100/100**. Your assistant can now answer from both.

Both sources are ready

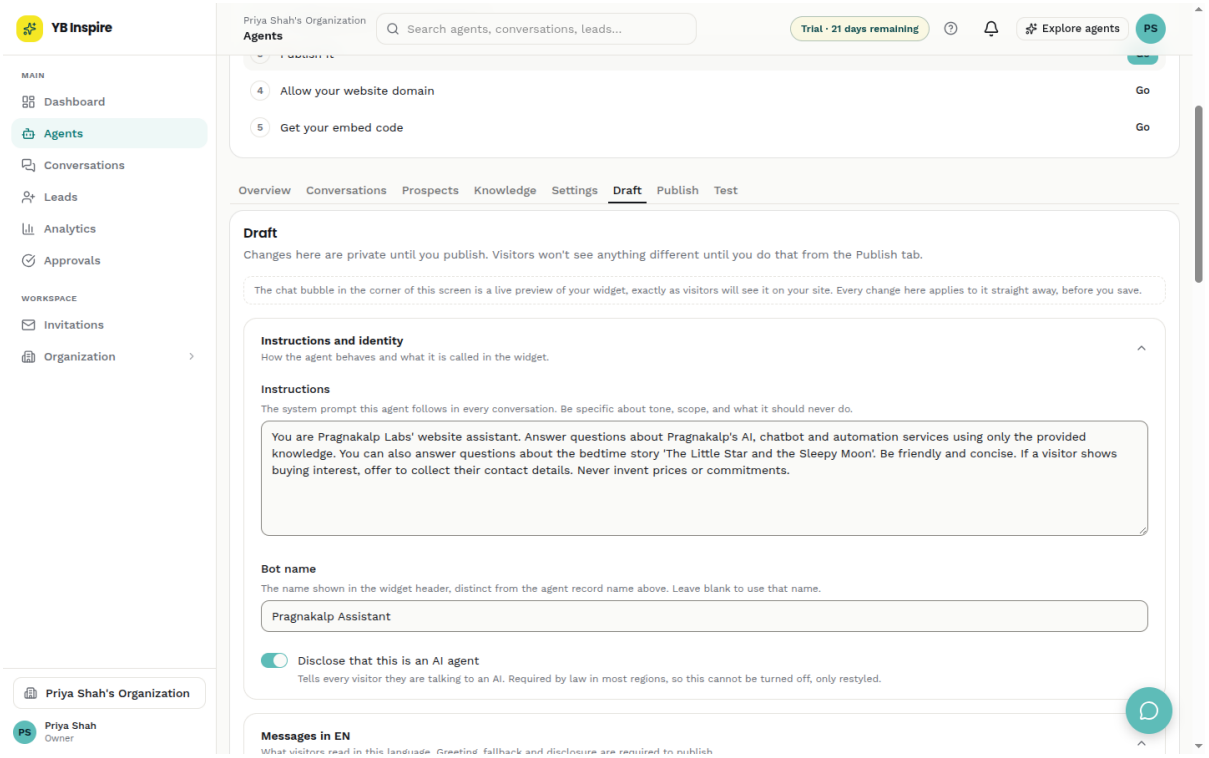

5. Tell your assistant how to behave (Draft)

Changes here stay private until you make them live on the Publish tab. The chat bubble in the corner of the screen previews your changes as you type.

5.1 Instructions and name

In **Instructions**, describe in plain words how the assistant should talk and what it should never do. In **Bot name**, enter the name visitors will see.

Bot name: Pragnakalp Assistant
Instructions: You are Pragnakalp Labs' website assistant. Answer questions about Pragnakalp's AI, chatbot and automation services using only the provided knowledge. You can also answer questions about the bedtime story 'The Little Star and the Sleepy Moon'. Be friendly and concise. If a visitor shows buying interest, offer to collect their contact details. Never invent prices or commitments.

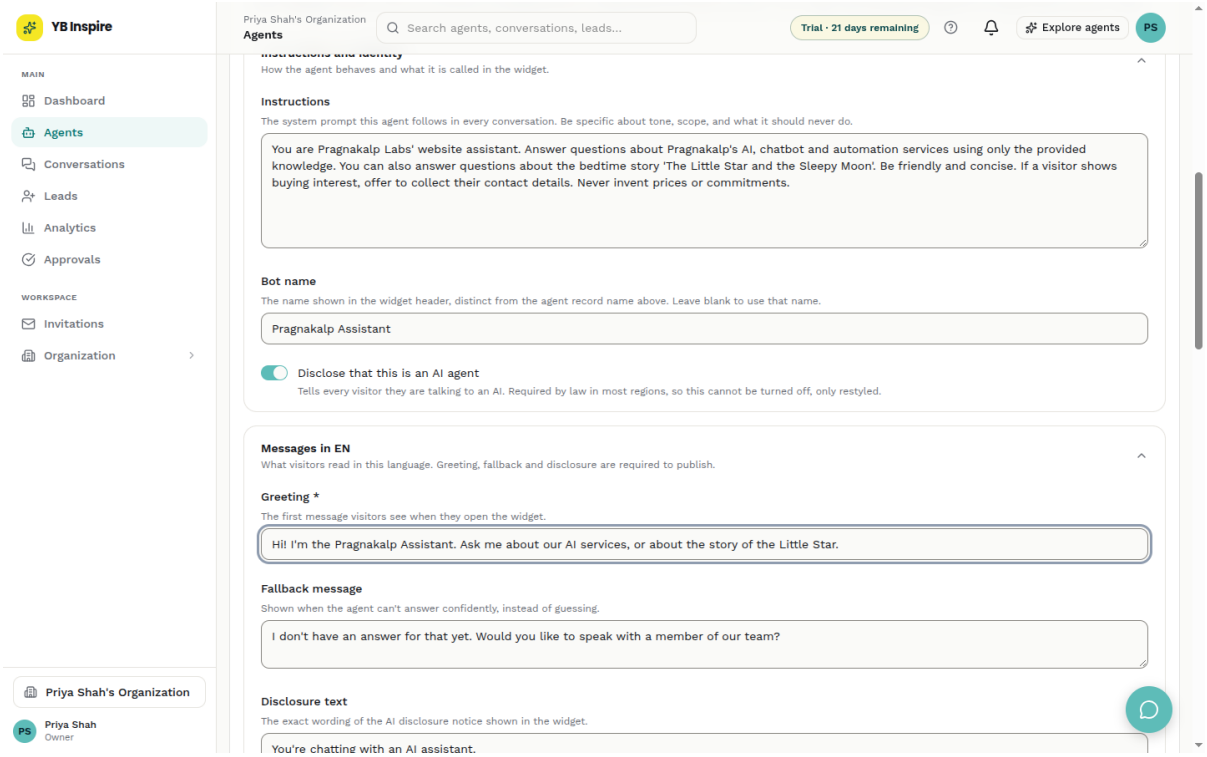

Instructions and bot name

The notice telling visitors they are chatting with an AI is always on. You can change its wording but not turn it off.

5.2 Messages visitors see

The **Greeting** is the first thing visitors read. The **Fallback message** is shown when the assistant is not sure of an answer. Both, plus the AI notice, must be filled in before you can go live.

Greeting: Hi! I'm the Pragnakalp Assistant. Ask me about our AI services, or about the story of the Little Star.

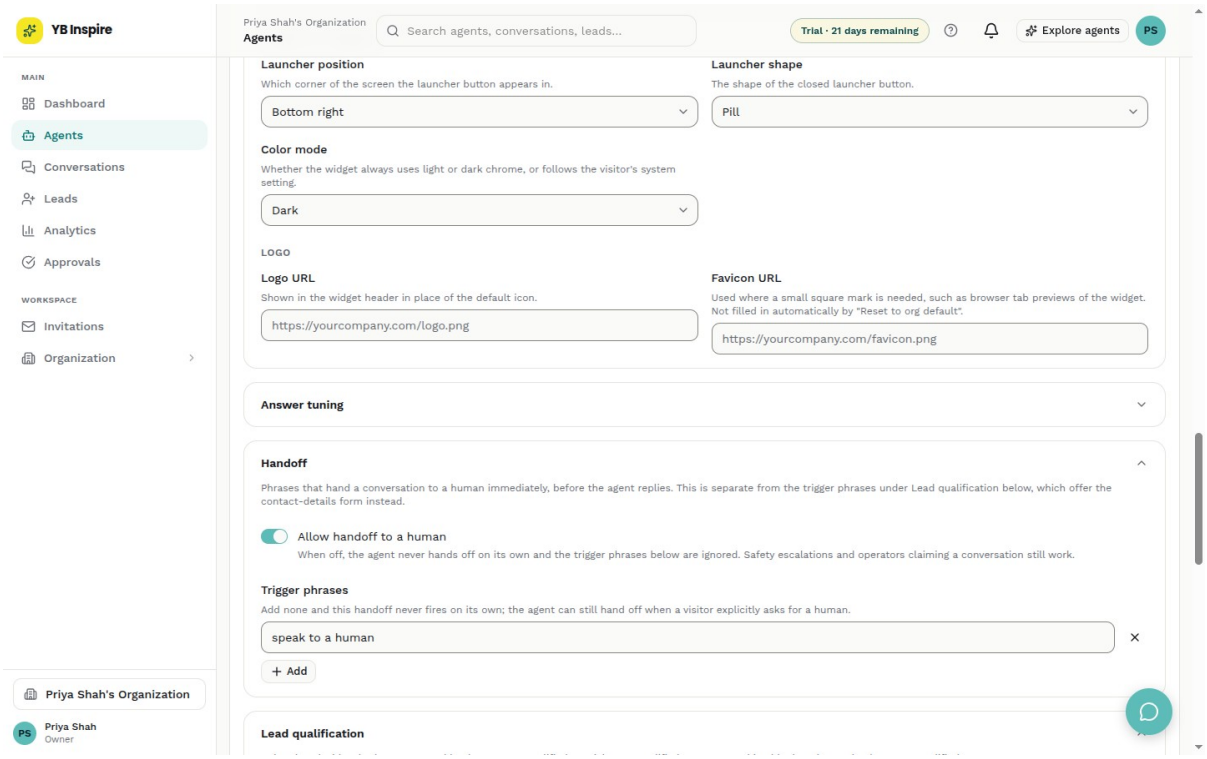

The messages section

5.3 Passing the chat to a person (Handoff)

Open **Handoff**. Keep **Allow handoff to a human** switched on. Click **Add** and type a phrase. When a visitor writes it, the chat is passed to your team straight away.

Phrase: speak to a human

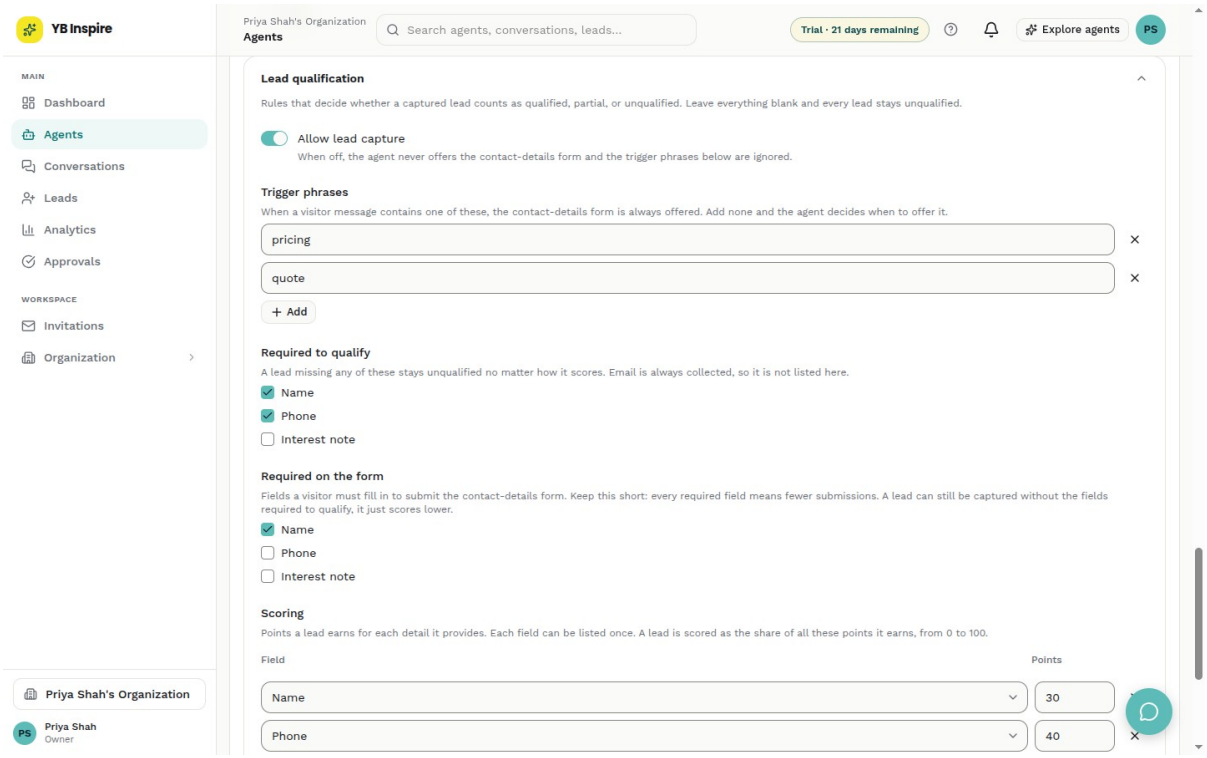

5.4 Collecting contact details (Leads)

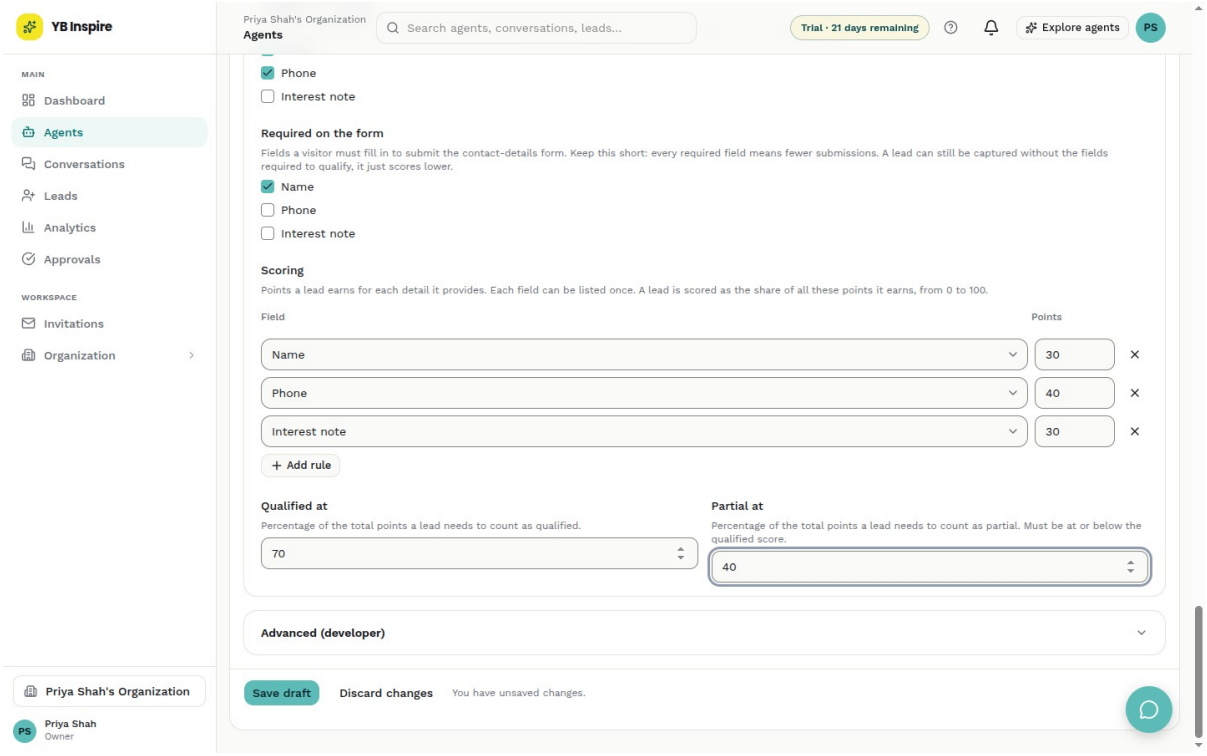

Open **Lead qualification** and keep **Allow lead capture** switched on. Then fill in:

- **Trigger phrases:** words that always bring up the contact form. We used **pricing** and **quote**.
- **Required to qualify:** what a contact must include to count as a good lead. We ticked Name and Phone.
- **Required on the form:** what visitors must fill in. We ticked Name. Email is always asked for.
- **Scoring:** points for each detail given. We used Name 30, Phone 40, Interest note 30.
- **Qualified at / Partial at:** we used 70% and 40%.

With these settings, a visitor who gives their name, phone and what they are interested in counts as **Qualified**.

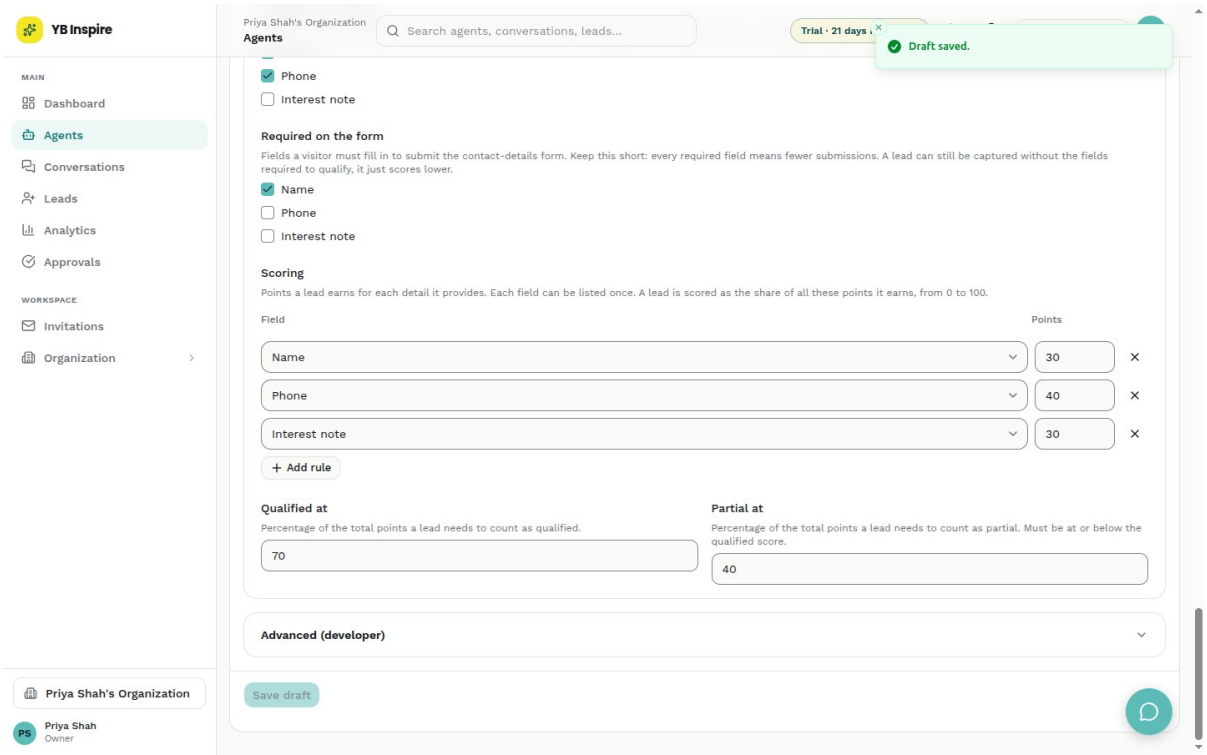

Trigger phrases and required fields

Scoring

5.5 Save

Click **Save draft** at the bottom. You see **Draft saved**. Visitors do not see these changes yet.

Draft saved

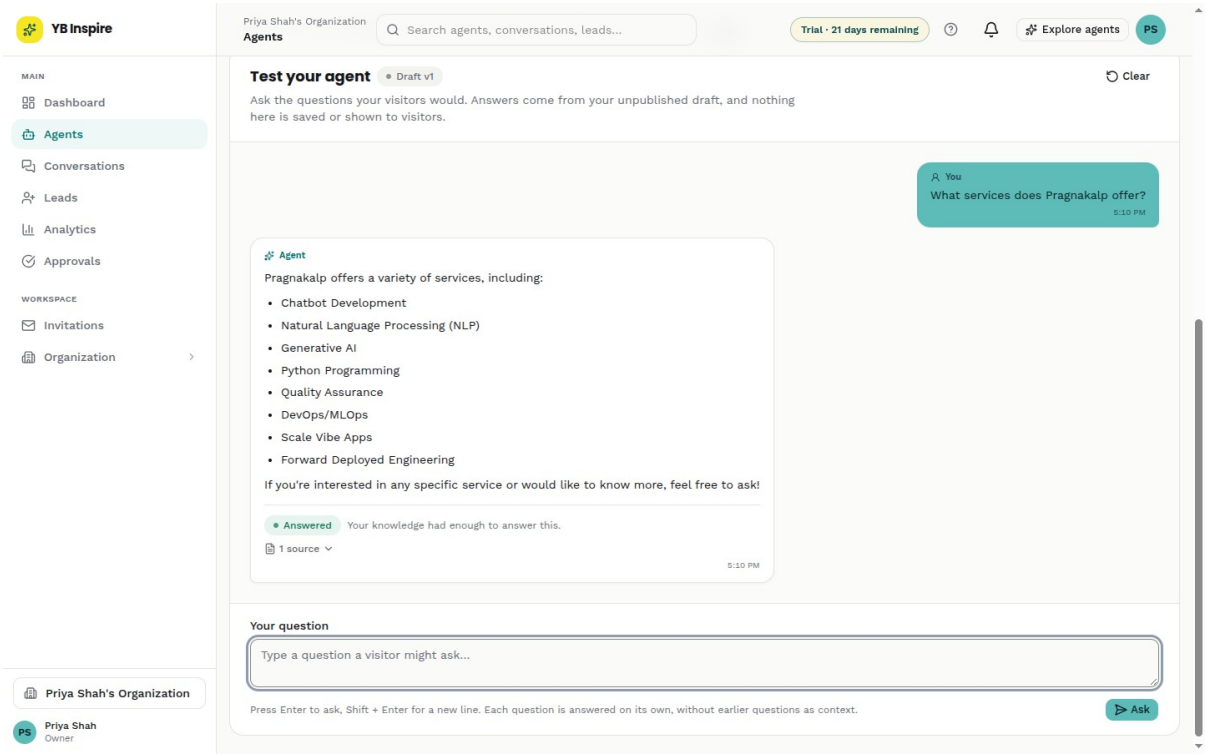

6. Try it out (Test)

Ask the questions your visitors would. Nothing here is shown to visitors.

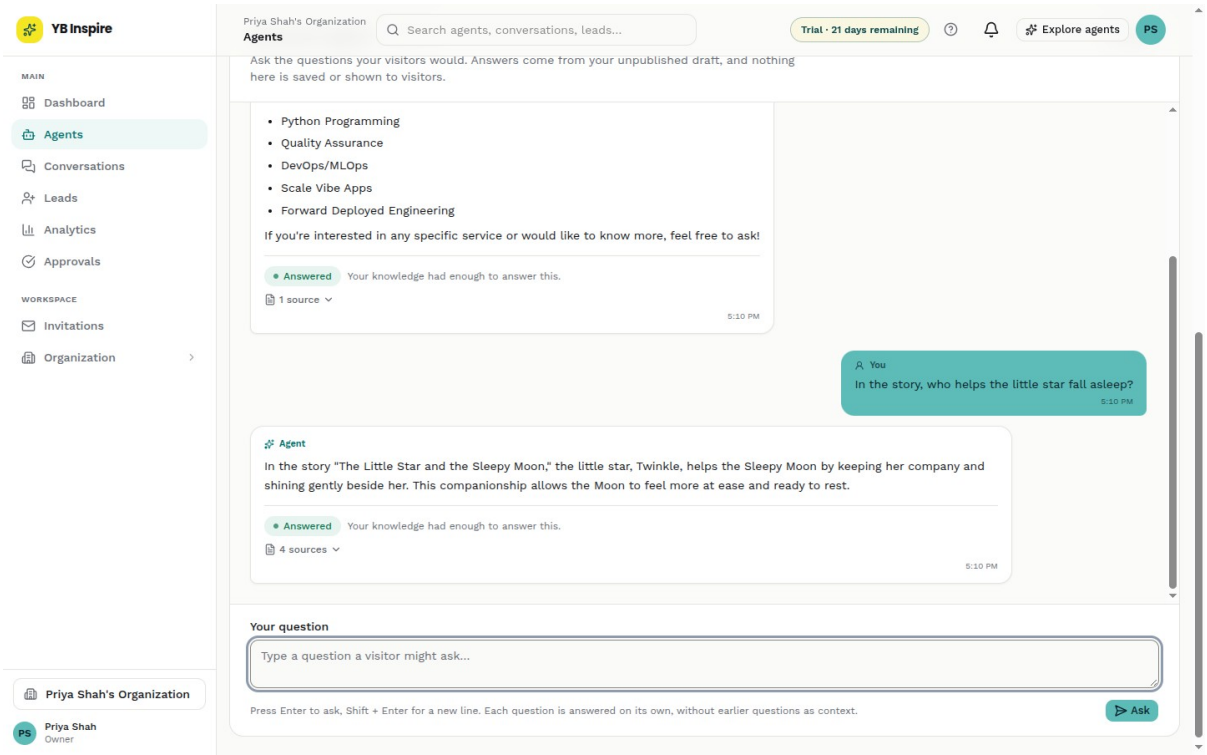

Open the **Test** tab, type a question and press **Enter**. Each answer shows **Answered** when your content had the answer, and how many sources it used.

We tried three questions:

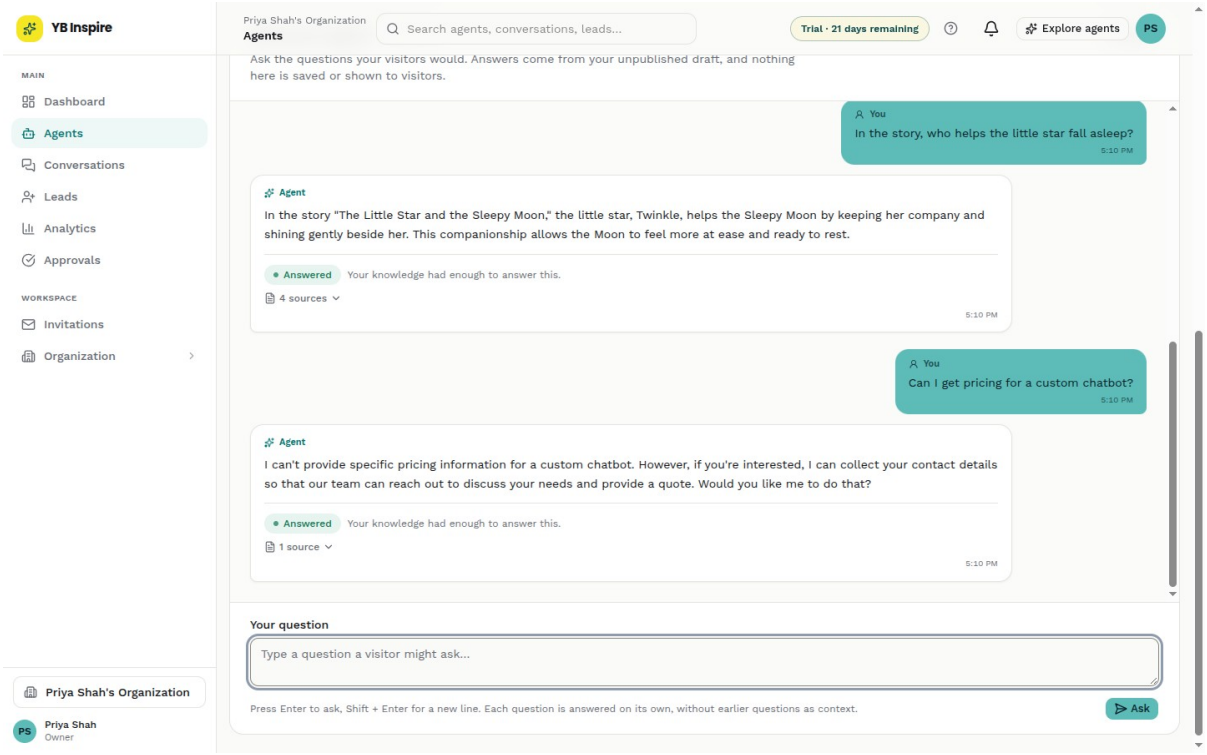

- "What services does Pragnakalp offer?" was answered from the website.
- "In the story, who helps the little star fall asleep?" was answered from the PDF.
- "Can I get pricing for a custom chatbot?" did not make up a price and offered to take contact details.

Answer from the website

Answer from the PDF

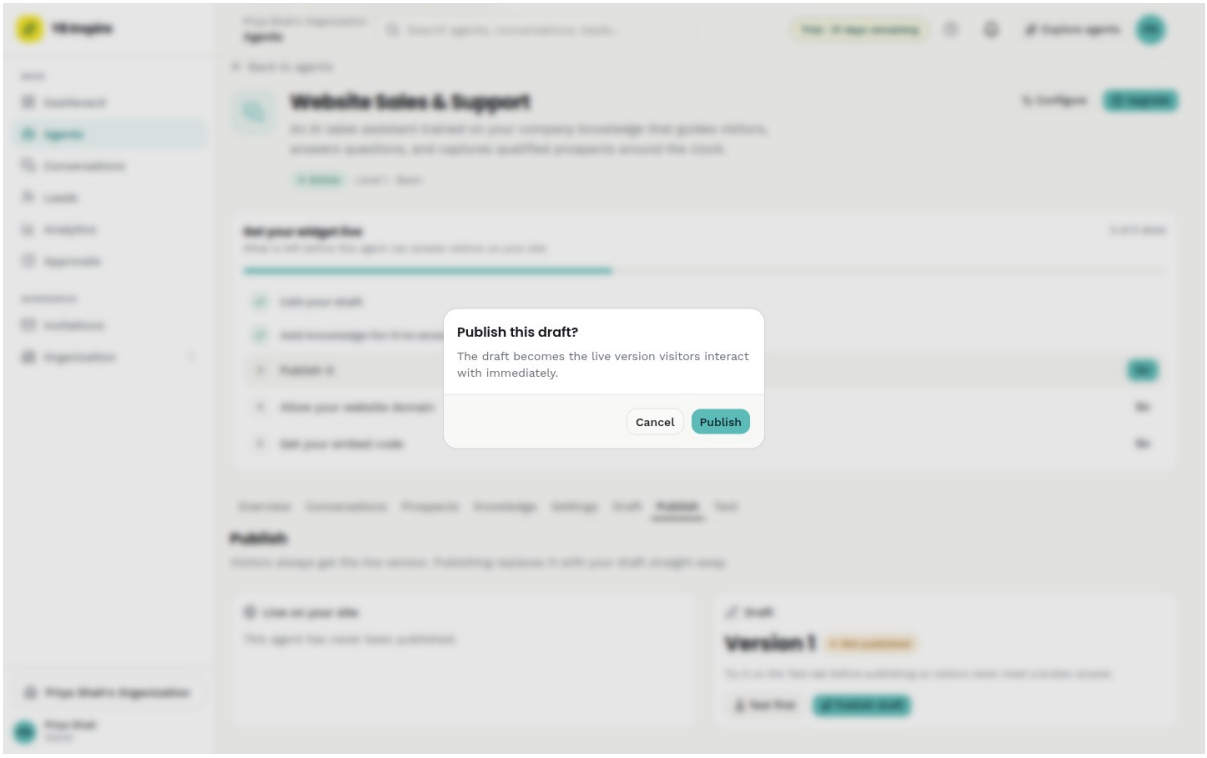

A pricing question

7. Go live (Publish)

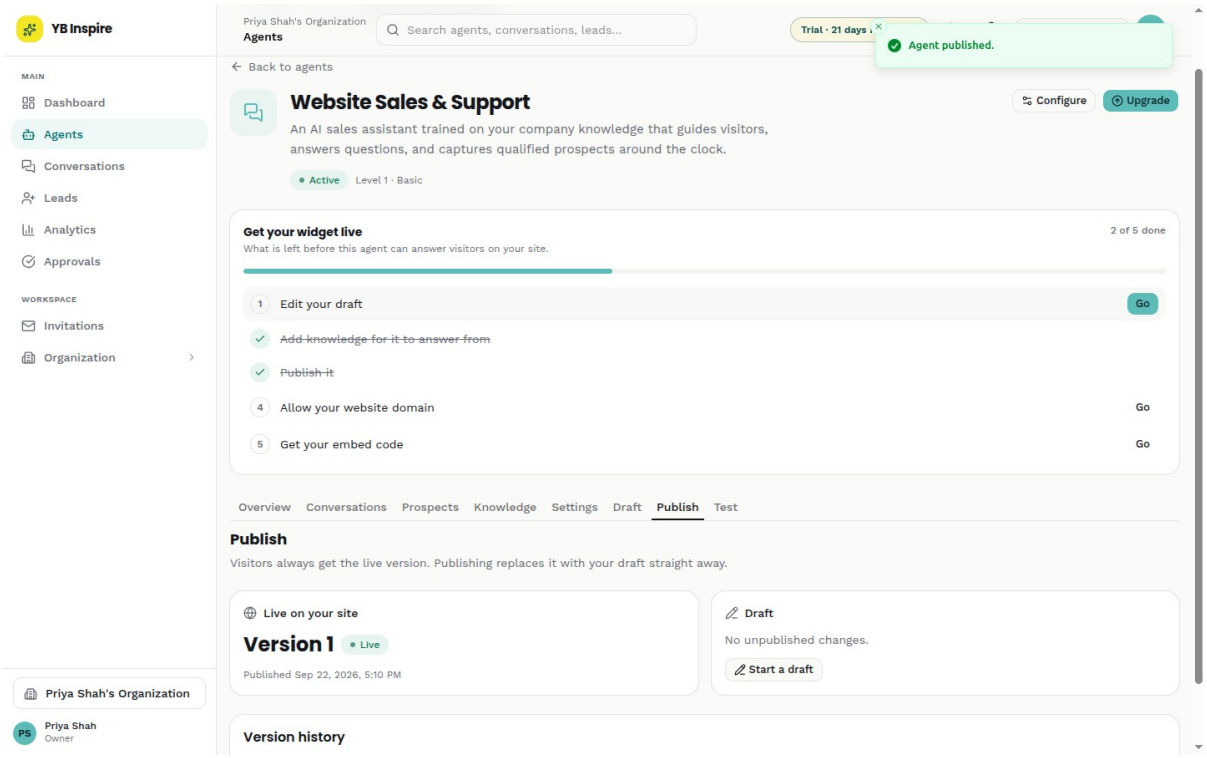

Publishing makes your draft the version visitors talk to.

Open the **Publish** tab and click **Publish draft**, then **Publish** to confirm. It now shows **Version 1, Live**.

Every version you publish is kept. If something goes wrong, click **Roll back to this version** on an earlier one.

Confirming

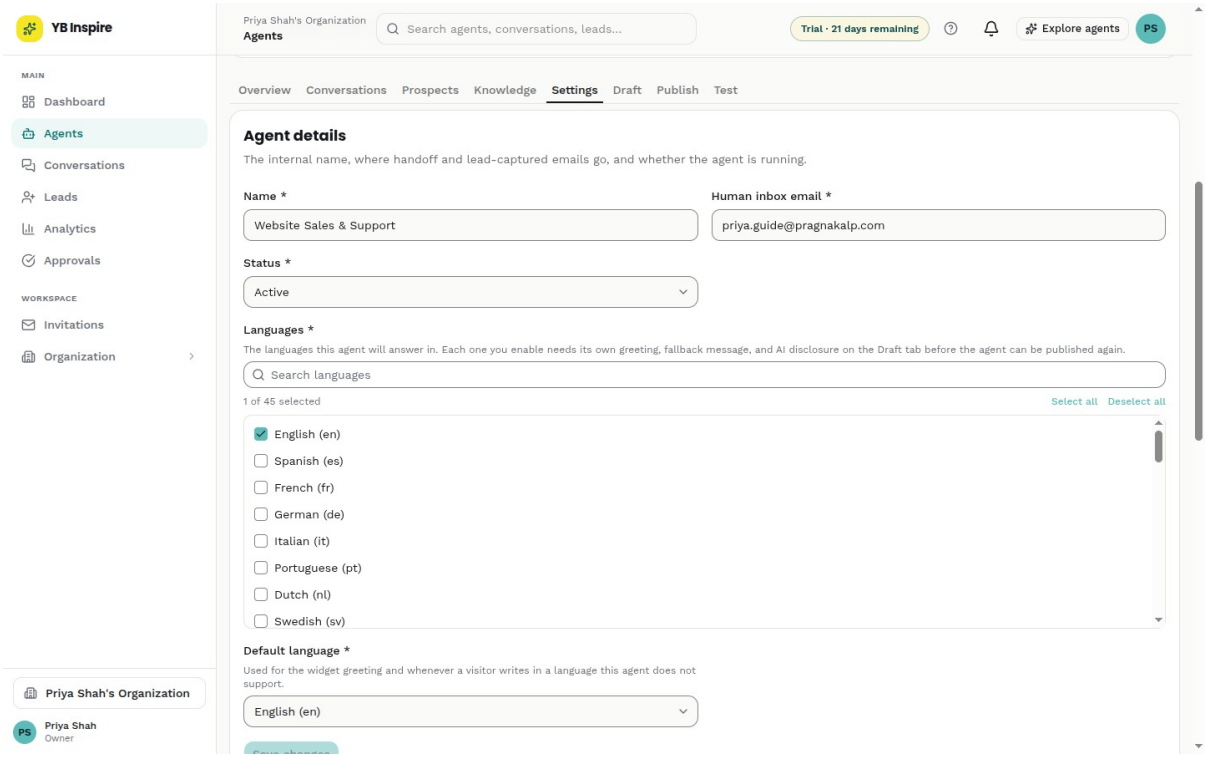

Version 1 is live

8. Add the chat window to your website (Settings)

Two steps: say which website it may appear on, then copy the code for your website.

8.1 Check your details

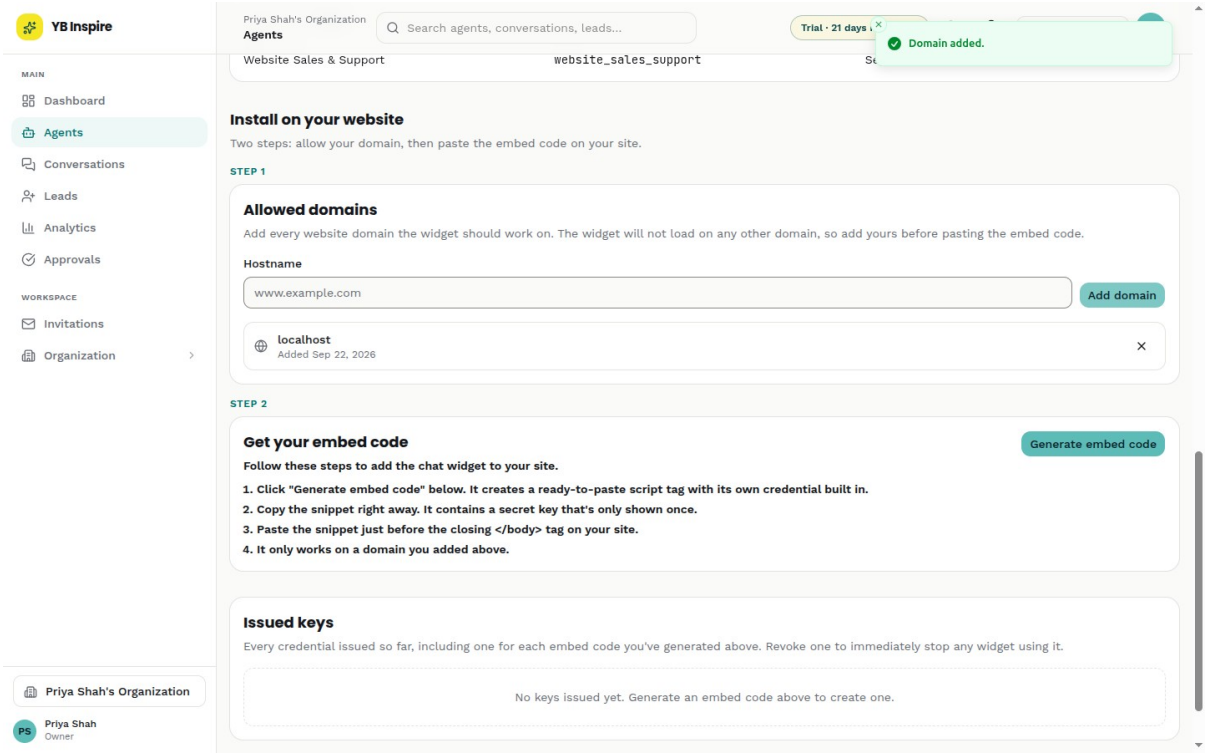

At the top of **Settings**, check **Human inbox email**. This is where you are emailed when a visitor asks for a person or leaves their details. You can also choose which languages the assistant speaks.

Assistant details and languages

8.2 Allow your website

Under **Allowed domains**, type your website address (for example **www.yourcompany.com**) and click **Add domain**. The chat window only appears on websites listed here.

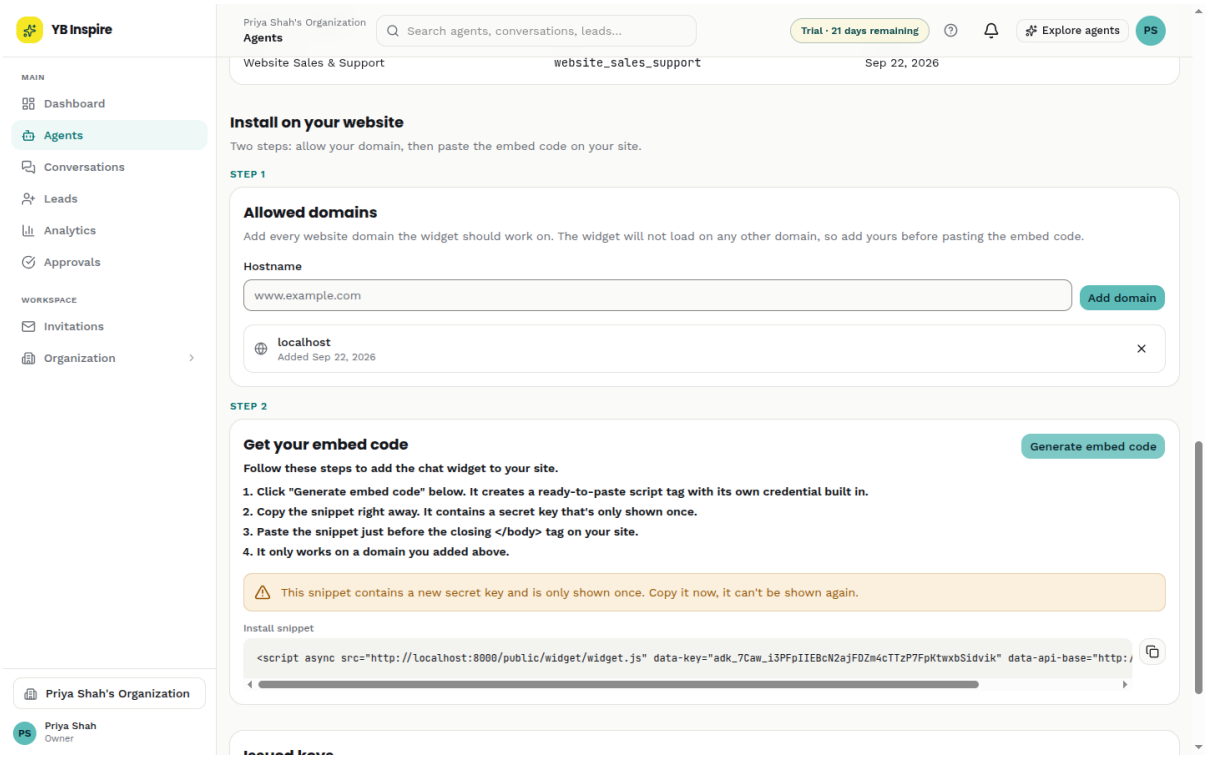

A website added to the allowed list

8.3 Get the code

Click **Generate embed code** and copy the code straight away, because it is shown only once. Send it to whoever looks after your website and ask them to add it to every page.

If the code is ever shared by mistake, you can switch it off under **Issued keys** and create a new one.

The code for your website

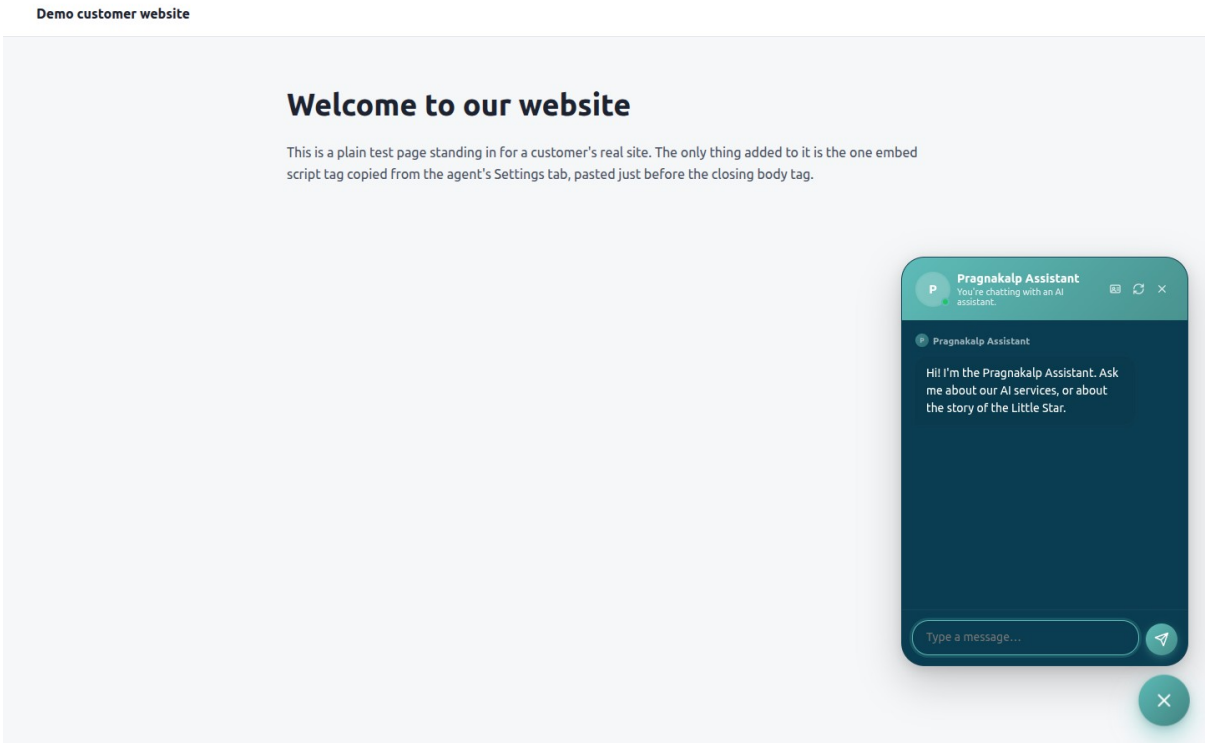

9. Try the chat window as a visitor

We added the code to a simple test page to see exactly what a visitor sees.

9.1 Open the chat

A round chat button appears in the bottom-right corner. Click it. The window shows the bot name, the AI notice and your greeting.

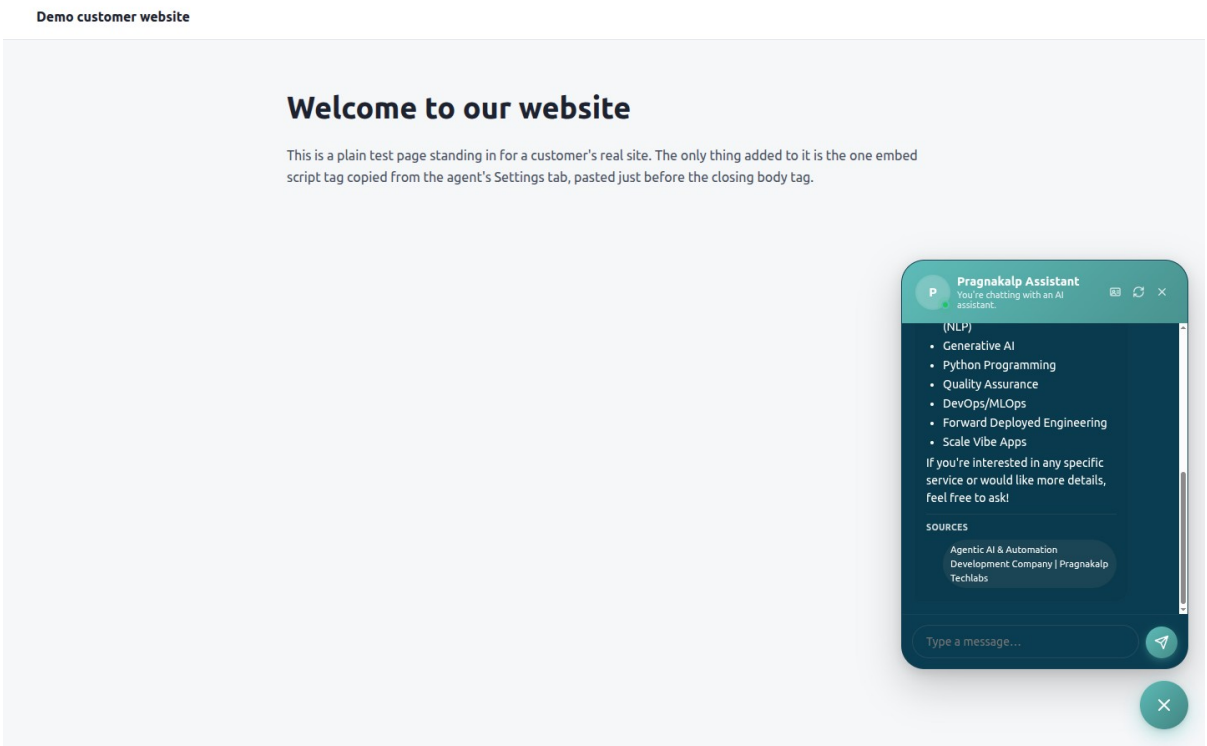

The three small buttons at the top are: **Leave your details**, **Start a new conversation** and **Close chat**.

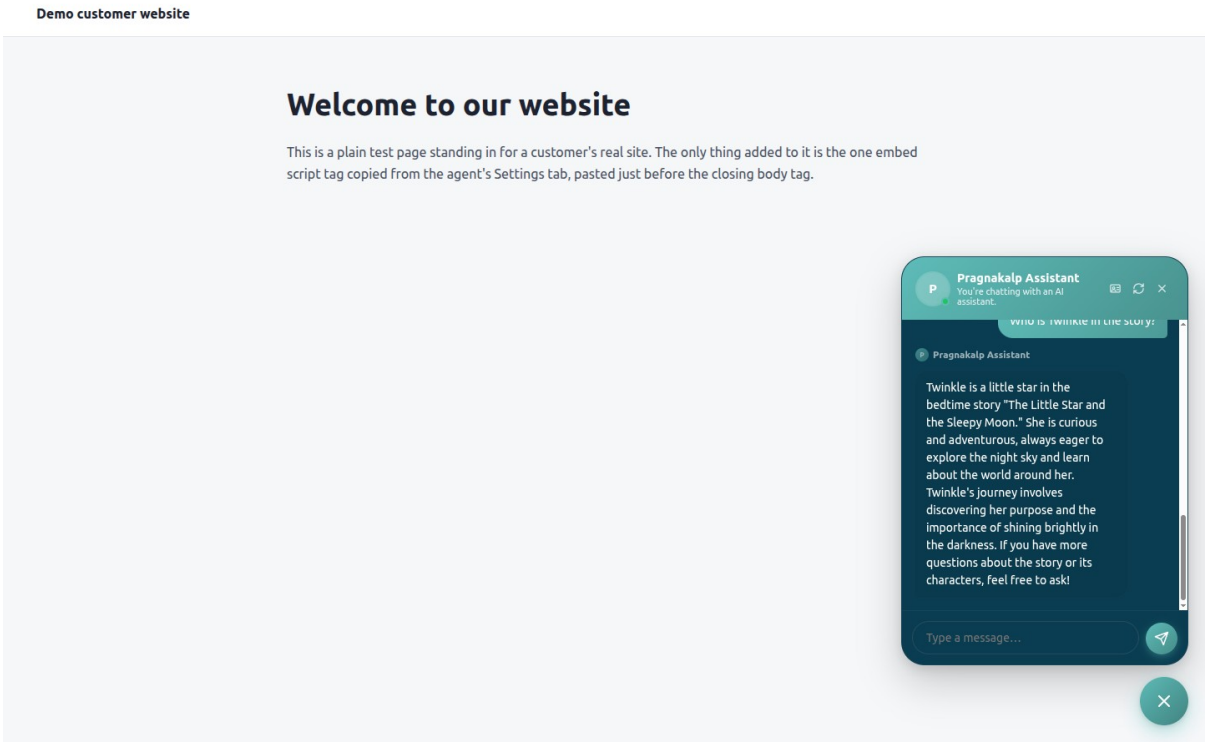

The chat window open on a web page

9.2 Ask questions

Answers appear with a **Sources** list underneath, so visitors can see where the answer came from.

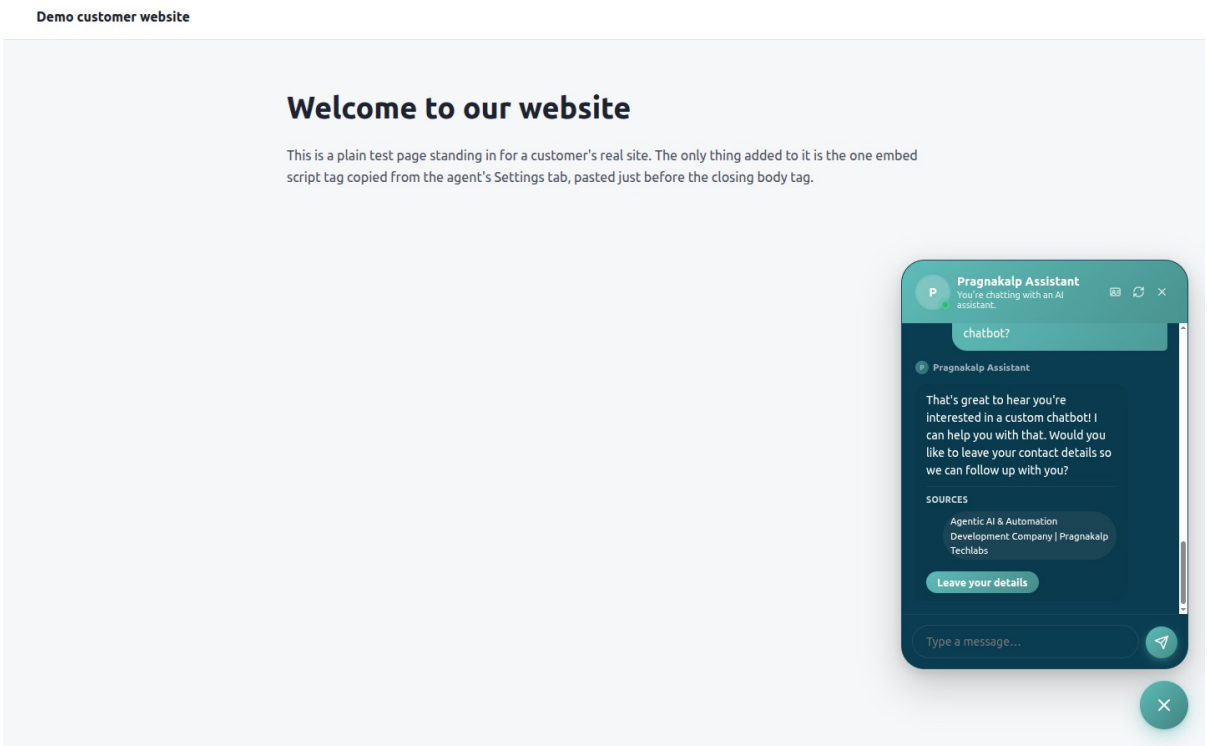

An answer from the website

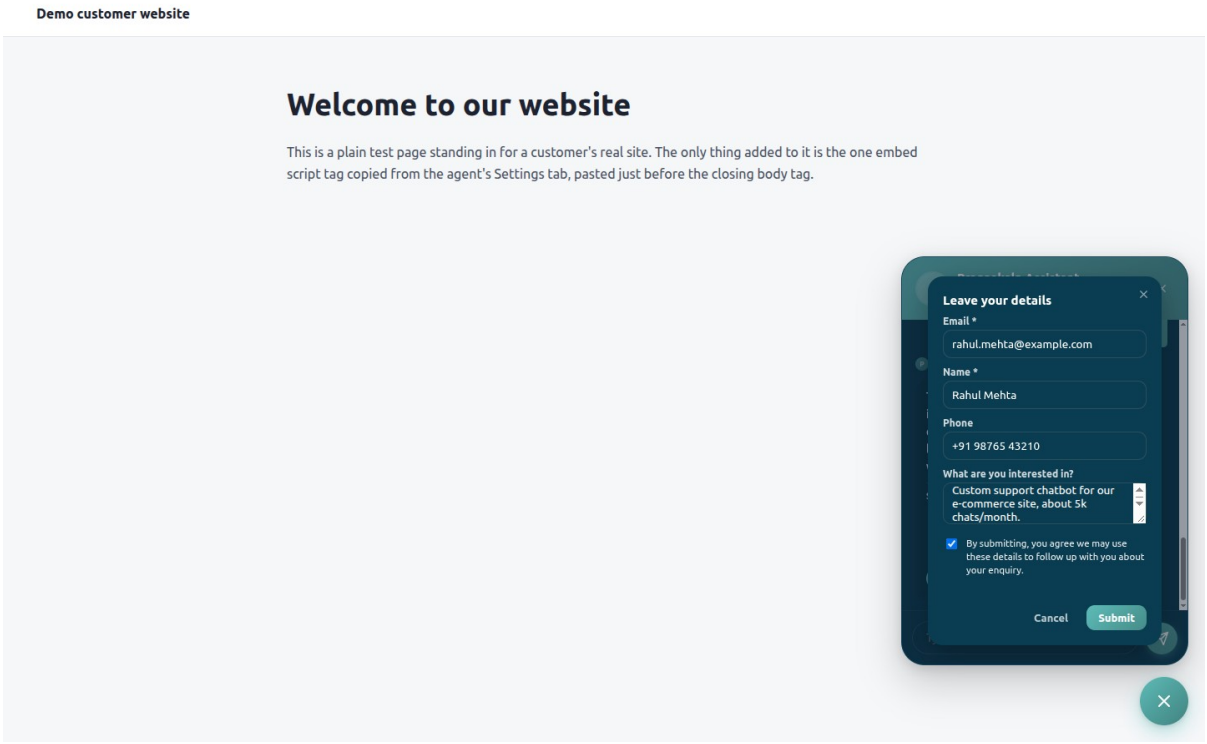

An answer from the PDF

9.3 Leave contact details

We asked "Can I get a quote for a custom chatbot?". Because it contains **quote**, the reply has a **Leave your details** button. The visitor fills in the form, ticks the consent box and clicks **Submit**, then sees a thank-you message.

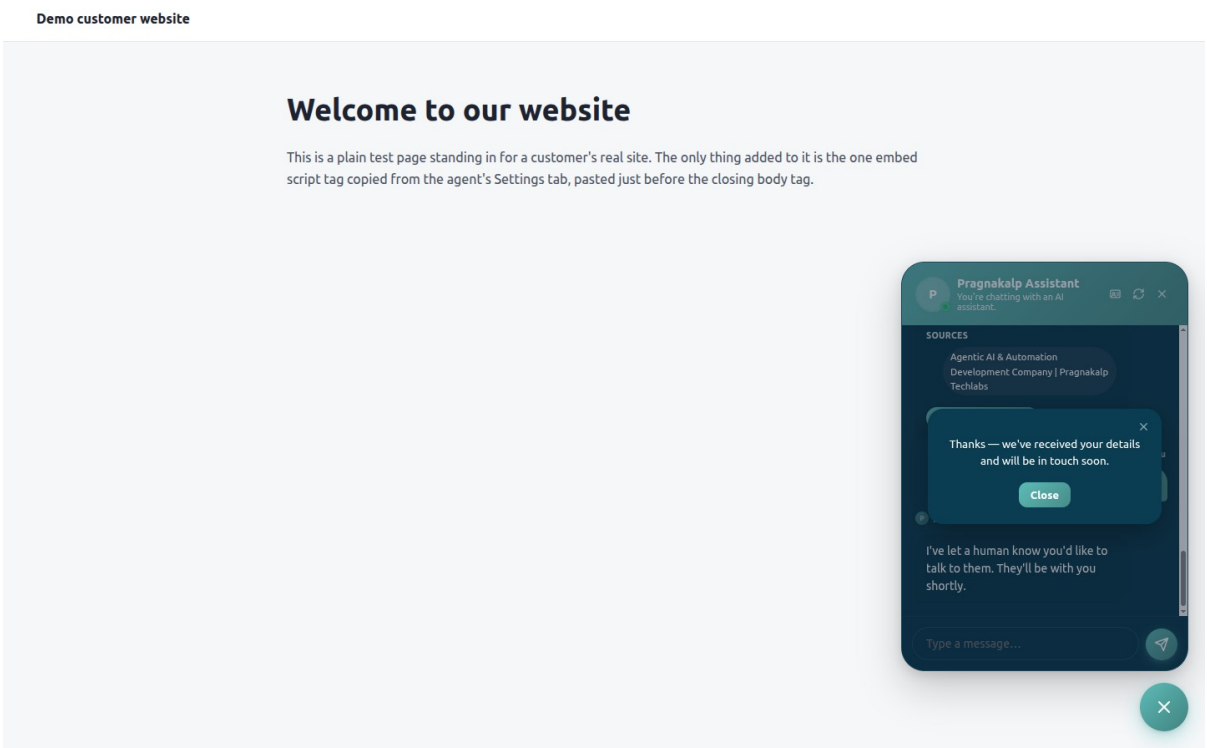

The offer to leave details

The contact form

9.4 Ask for a person

The visitor wrote "I want to speak to a human please". The assistant stops and replies that a person has been told and will join shortly.

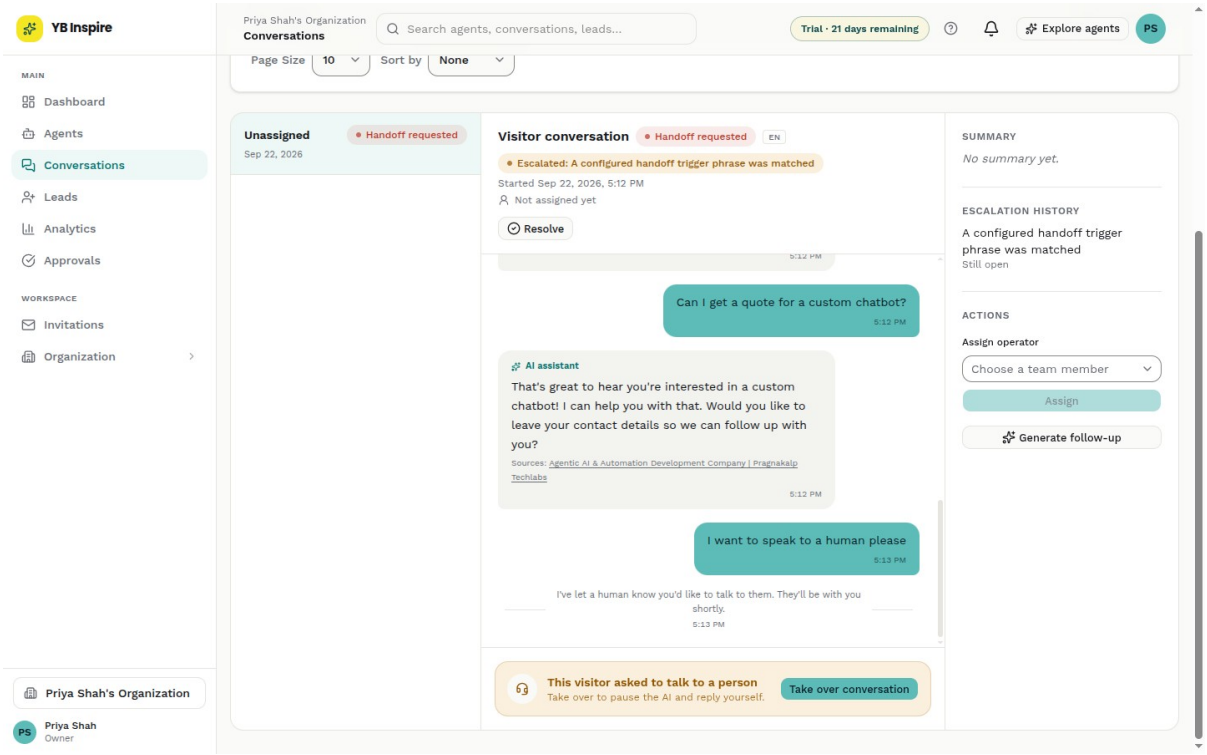

A visitor asking for a person

10. Reply to a visitor yourself

You and your team reply from the Conversations page. New messages appear on their own, without refreshing.

10.1 Find the conversation

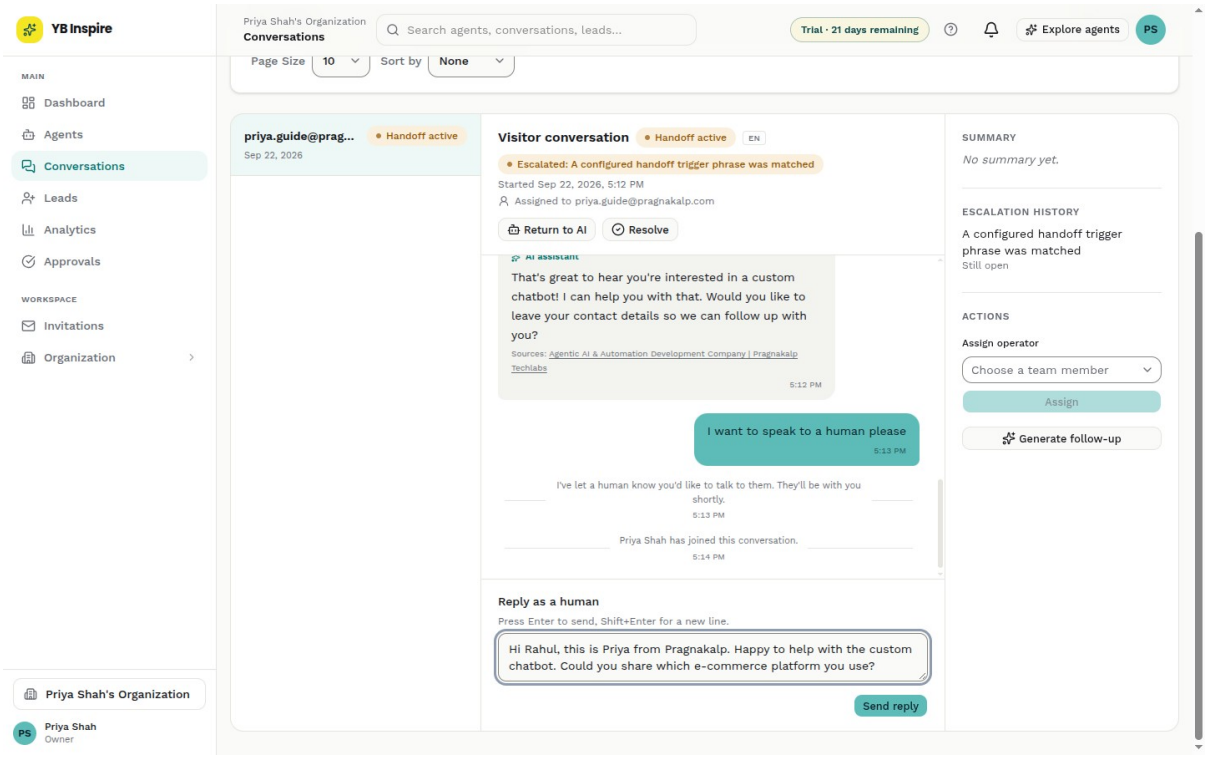

Click **Conversations** in the left menu. The chat shows **Handoff requested** and says why. You can read everything said so far. At the bottom, click **Take over conversation**.

A visitor waiting for a person

10.2 Reply

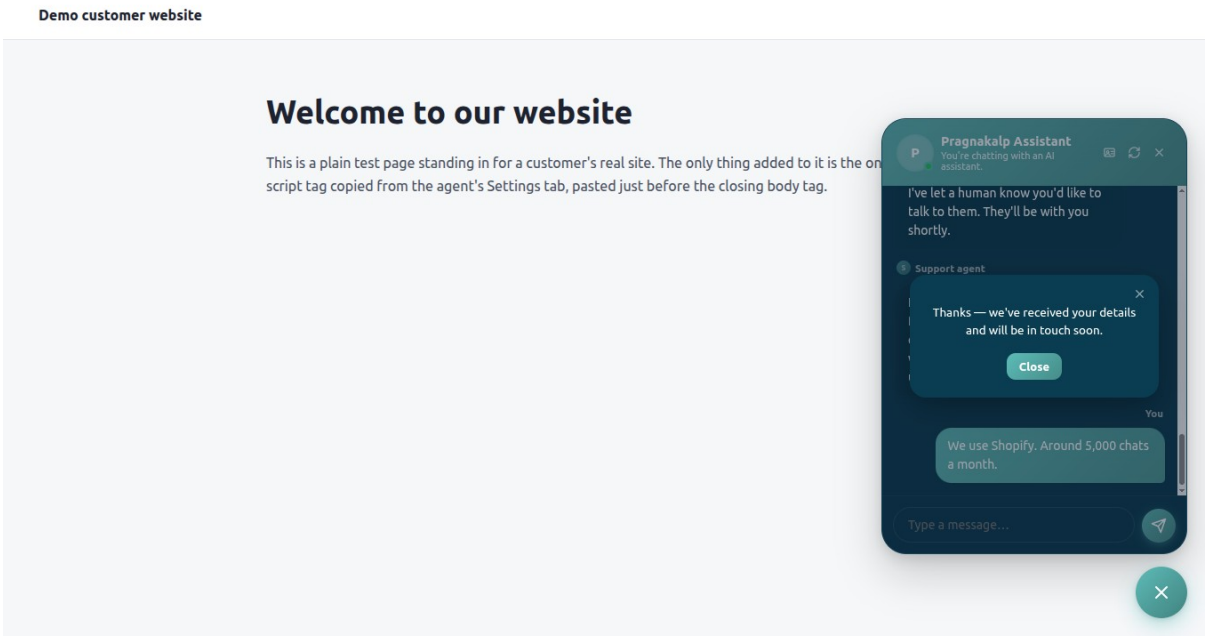

The assistant pauses and the visitor is told you have joined. Type in **Reply as a human** and press **Enter** to send. Use **Shift + Enter** to start a new line.

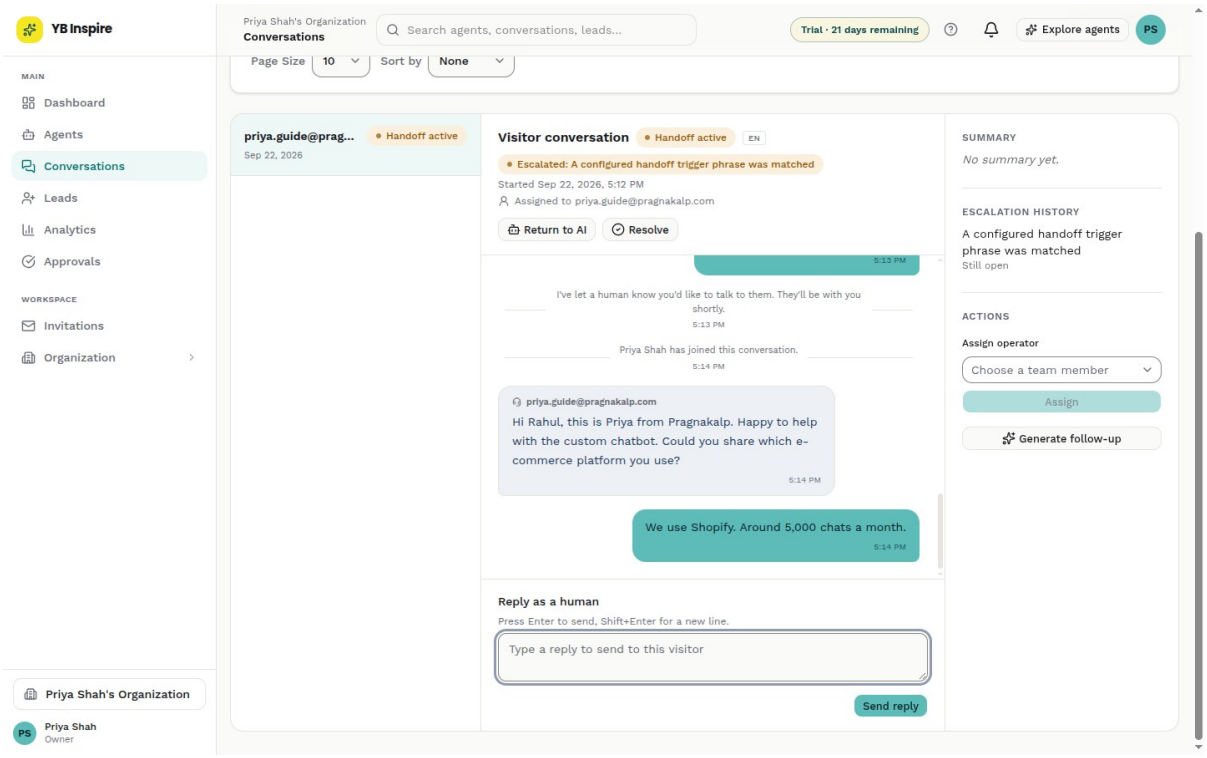

Typing a reply

10.3 Chat back and forth

Your reply appears in the visitor's chat window within seconds, marked **Support agent**. Their answer appears on your screen just as quickly.

What the visitor sees

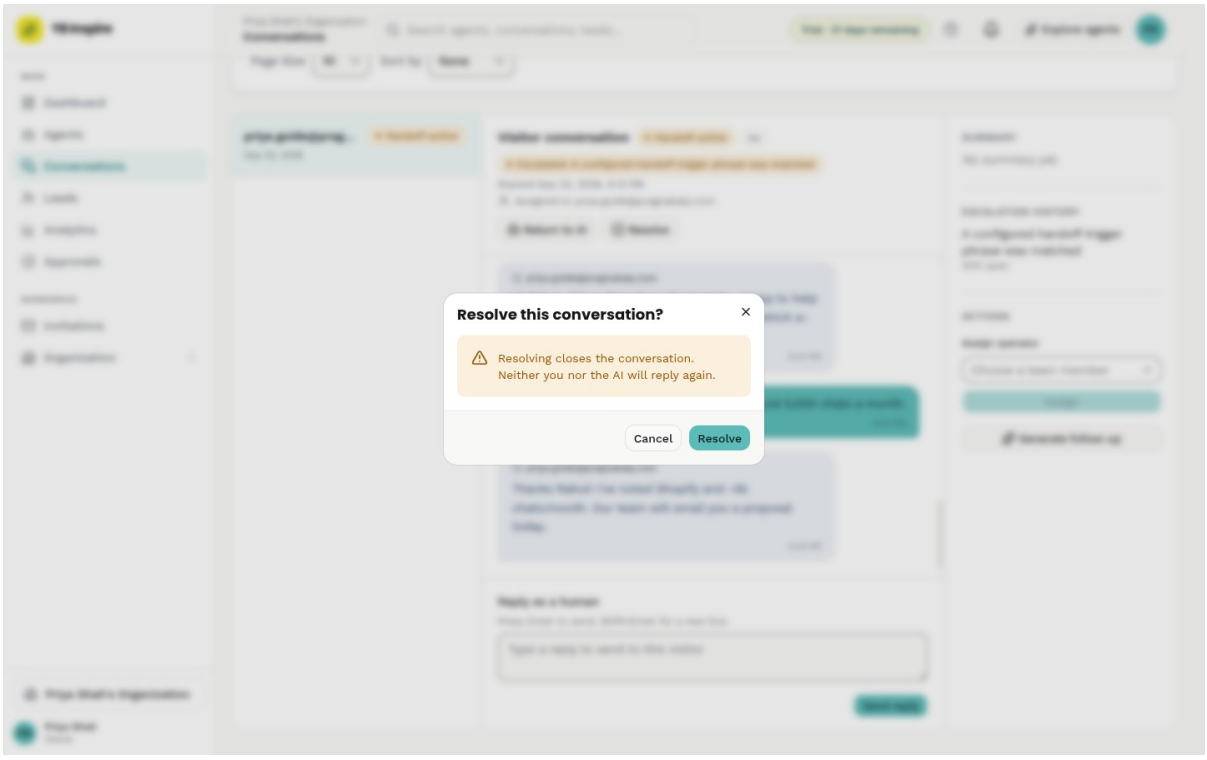

What you see

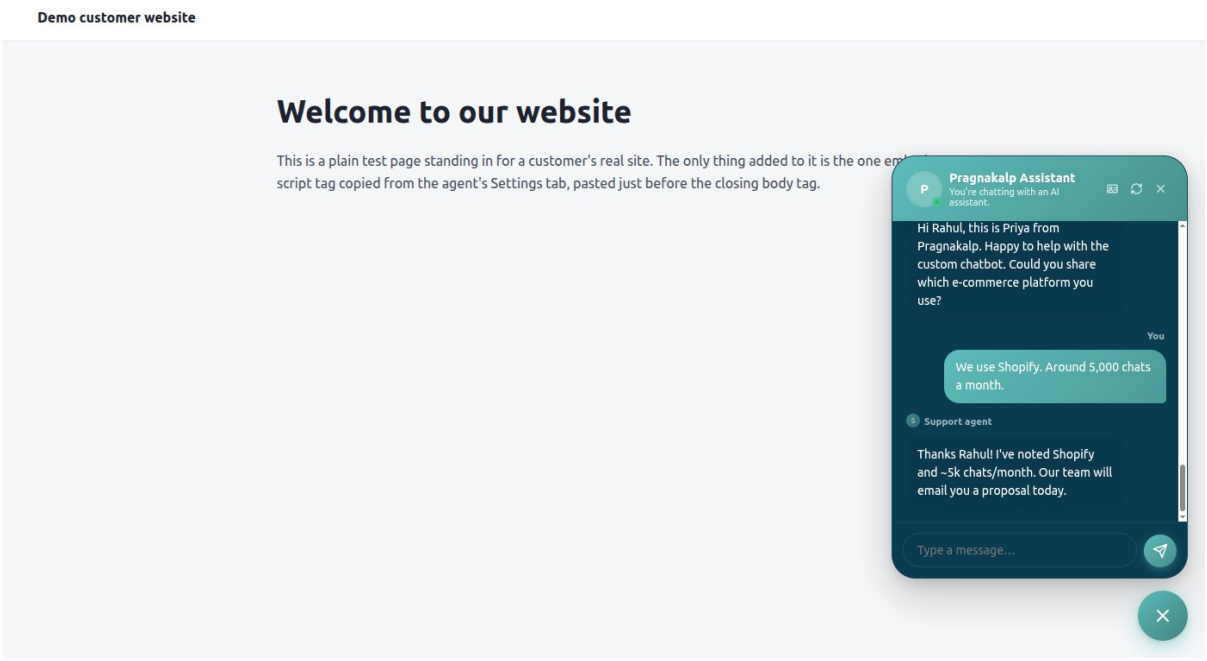

10.4 Finish the conversation

When you are done, click **Resolve** and confirm. The conversation is closed. If you would rather hand it back to the assistant, click **Return to AI** instead.

The visitor can start fresh at any time with **Start a new conversation** at the top of the chat window.

Closing the conversation

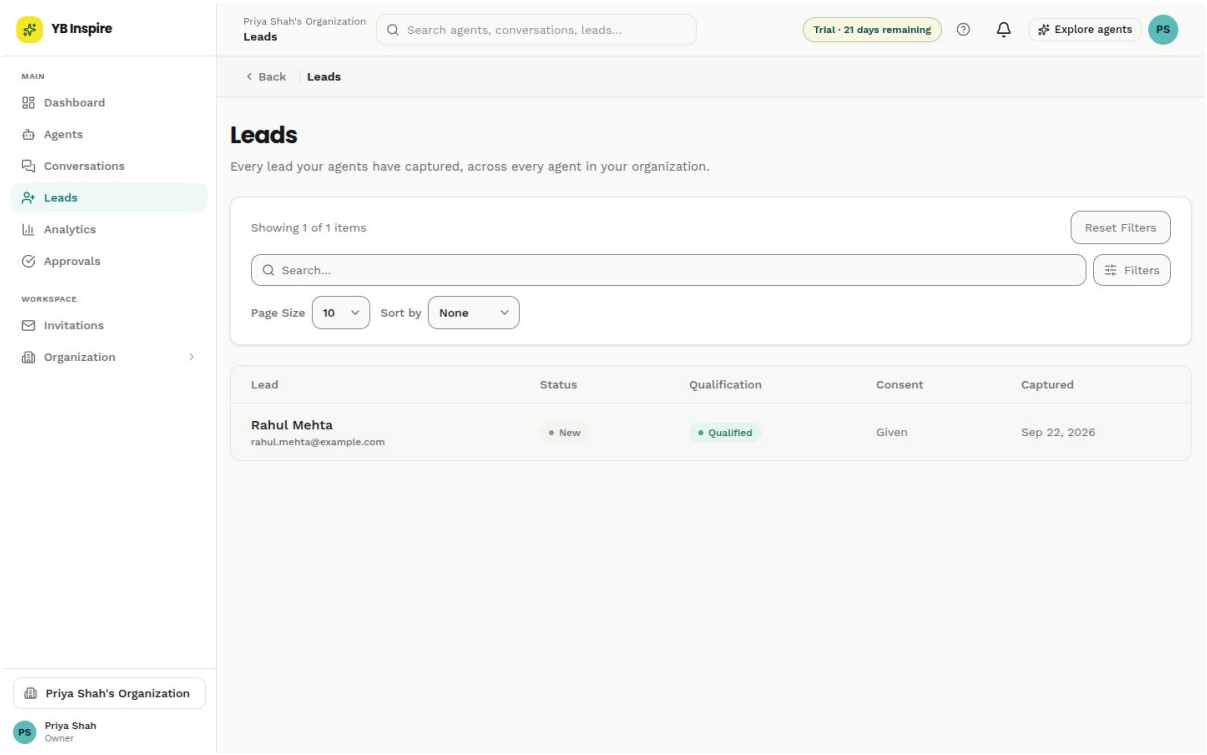

The visitor's final view

11. See the contacts you collected

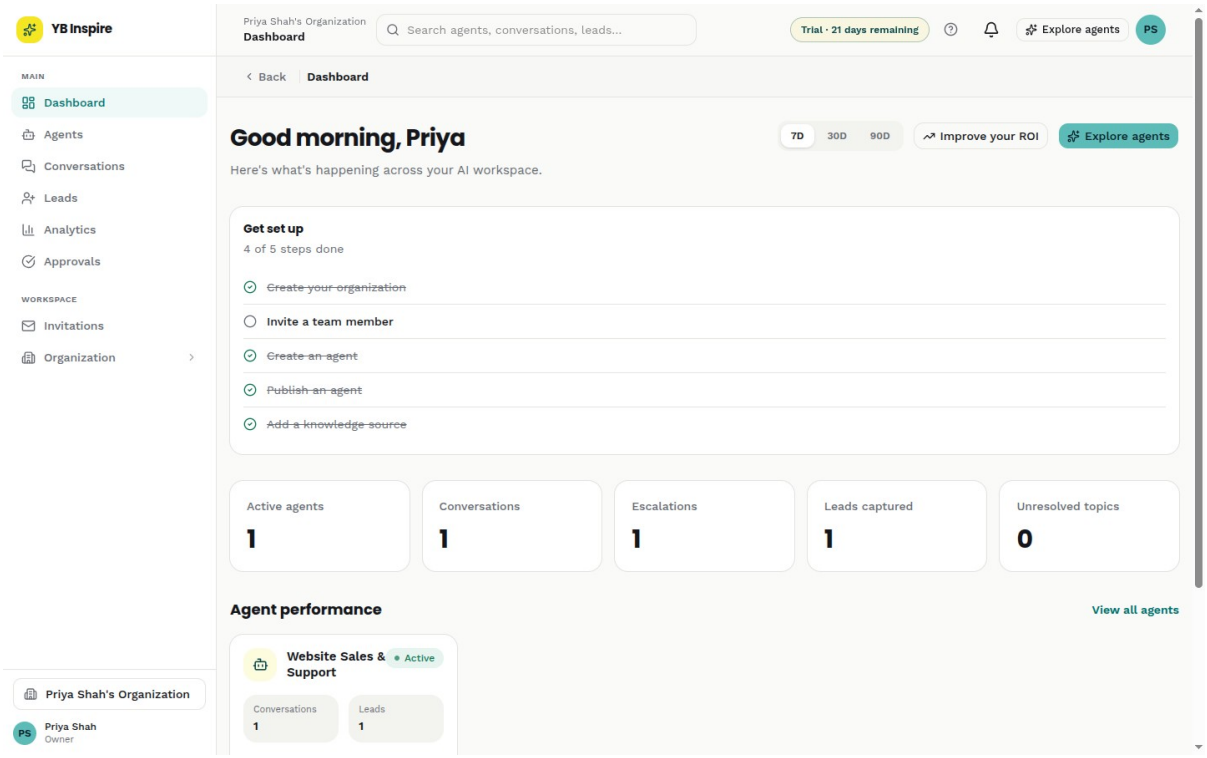

Everyone who left their details, in one list.

Click **Leads** in the left menu. The visitor from our test, Rahul Mehta, is listed as **Qualified**, with consent given.

The same contacts also appear on your assistant's **Prospects** tab, and its chats on the **Conversations** tab.

The Leads page

The dashboard after the test

Quick checklist

The whole setup at a glance.

1. Create your account.
2. Knowledge: add your website and any PDFs, and wait until they show Ready.
3. Draft: write the instructions, greeting and messages; set your handoff phrase and lead settings; click Save draft.
4. Test: ask a few real questions.
5. Publish: click Publish draft.
6. Settings: add your website address, generate the code and send it to whoever manages your site.
7. Visit your website and try the chat yourself.
8. Reply to visitors from Conversations; find their details under Leads.
